40 Lifeline for Renewable Power

Without a radically expanded and smarter electric grid, wind and solar will remain niche power sources.

By DAVID TALBOT

■ www.technologyreview.com/grid Watch a GE researcher describe how a consumer might use a smart grid.

48 Interpreting the Genome

New technologies will soon make it possible to sequence thousands of human genomes. Now comes the hard part: understanding all the data.

By EMILY SINGER

■ www.technologyreview.com/pgp A participant in the Personal Genome Project shares his thoughts on what it means to have his DNA sequenced.

54 Parallel Universe

In its effort to move forward, Intel dusts off old supercomputing technology.

By ROBERT X. CRINGELY

■ www.technologyreview.com/multicore Cringely explains why programming for multicore processors is so hard, and why getting it right matters.

ESSAY

58 "Very Stunning, Very Space, and Very Cool"

An oral history of space tourism.

By ADAM FISHER

■ www.technologyreview.com/space Hear space tourists tell their stories about traveling into the final frontier.

NOTEBOOKS

10 Rebuilding the Grid

Clean energy depends on new infrastructure.

By Cathy Zoi

10 Cancer Genomics

DNA sequencing will transform our understanding of cancer.

By Elaine Mardis

11 Multicore

Programming

We need languages that take full advantage of multicore processing.

By Paul Tyma

FORWARD

13 Touching the Future

Researchers are reinventing the touch screen.

14 Patching Hearts

A new tissue-engineering material closely mimics the remarkable properties of the heart.

15 The Cost of Carbon

Will putting a price on carbon dioxide emissions really increase use of renewable energy?

16 Beyond Blu-ray

Cheap holographic devices offer vast storage capacity.

18 Cells as Circuits

Computer science tools could help identify drug targets.

20 Recession-Resistant Medicine

Novel medical treatments thrive as investors grow cautious.

TO MARKET

23-26 Technology Commercialized

Caffeine detector, build-your-own super-camera, soy toner, cheap RFID, wearable media center, large-screen e-reader, voice Googling, electric Mini, rooftop wind power, magnetic depression treatment.

Q&A

28 Gilbert Metcalf

A leading economist explains why a carbon tax is the best strategy for cutting greenhouse gases and the use of fossil fuels. *By David Rotman*

PHOTO ESSAY

30 Moore's Law

The computer chip has evolved from a simple integrated circuit into a microprocessor with millions of transistors.

By Kristina Grifantini

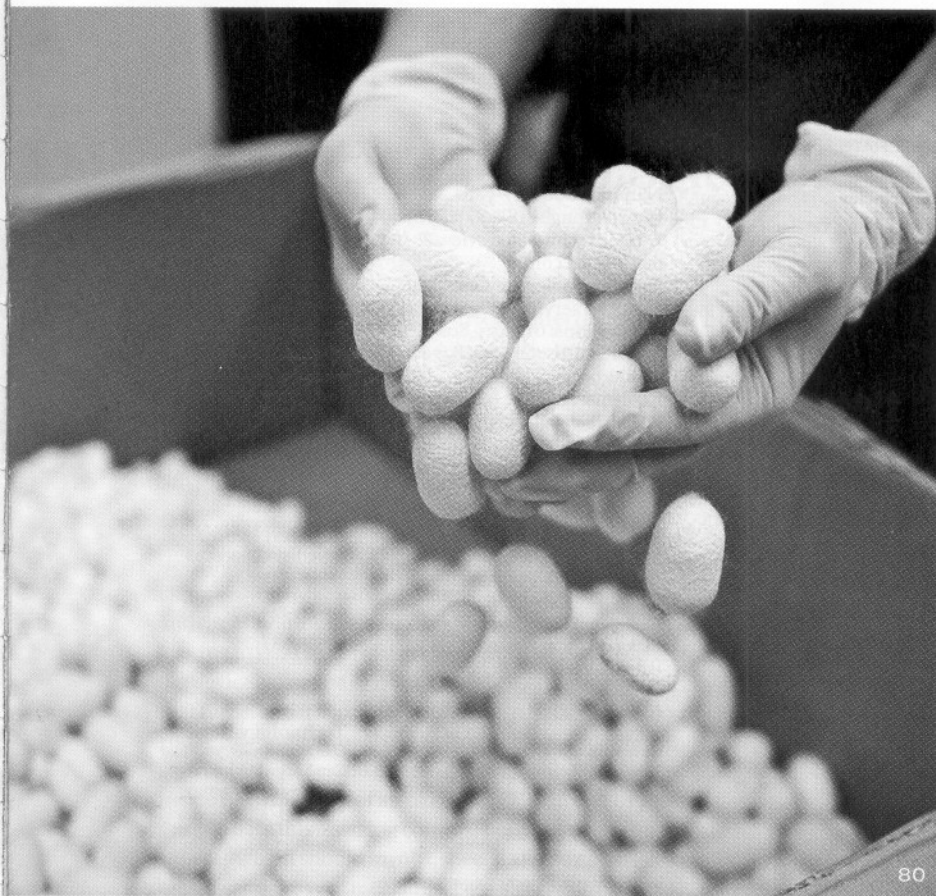

REVIEWS

70 Bootleg Battle Lines

Rival aesthetics in pop music's mashup community.

By Larry Hardesty

■ www.technologyreview.com/mashups Create your very own musical mashup.

72 RFID's Security Problem

Are new driver's licenses with RFID truly safe?
By Erica Naone

74 Our Past Within Us

The new field known as archaeogenetics is illuminating prehistory. *By Mark Williams*

HACK
