SPECIAL SECTION: MANUFACTURING

36 Can We Build Tomorrow's Breakthroughs?

U.S. manufacturing is in trouble. That's bad news not just for the country's economy but for the future of innovation.

By DAVID ROTMAN

46 The Chinese Solar Machine

Chinese solar companies have come to dominate the market. Just how did they do it? And can they maintain their lead?

By KEVIN BULLIS

50 Layer by Layer

With 3-D printing, we can make products more efficiently—and create some that were once impossible.

By DAVID H. FREEDMAN

54 Fire in the Library

Everything we store online is at the mercy of companies that could throw it all away—unless the Archive Team gets there first.

By MATT SCHWARTZ

60 The Mystery Behind Anesthesia

By mapping how neural circuits change under anesthesia, Emery Brown might solve the enduring riddle of consciousness.

By COURTNEY HUMPHRIES

8 Feedback 12 From the Editor

NOTEBOOKS

10 Defining Experience

A better definition of consciousness will help with tough ethical choices.

By Morten Overgaard

10 Net Worth

Efforts to preserve the Web should make use of the powerful, distributed collaboration it allows.

By Kris Carpenter Negulescu

11 Making Revolution

The U.S. can compete with China if it gives factory workers smarter tools.

By Rodney Brooks

TO MARKET

17–22 Technology Commercialized

Smart thermostat, blur-proof camera, GPS shoes, melanoma monitor, energy-sipping servers, Wi-Fi phones, and more.

GRAPHITI

24 Information's Social Highways

A startup studies the paths taken by viral messages.

By Mike Orcutt

Q&A

26 Prith Banerjee

The head of research at Hewlett-Packard describes the new technologies that could ensure HP's survival.

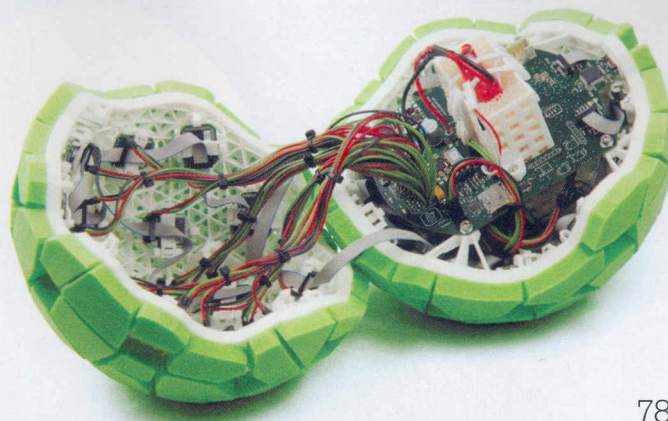

By Tom Simonite

PHOTO ESSAY

28 Ghosts in the Machines

Bethlehem Steel, once a symbol of American industry, went bankrupt in 2001. These photos help us imagine its glory days.

By Emily Singer

BUSINESS IMPACT

65-70 Disruptive Innovation

Disruptive technologies are reshaping industries and creating new winners and losers. Here's how businesses are confronting the challenge.

REVIEWS

72 "Tectonic Shifts" in Employment

IT is remaking workplaces faster than new jobs are being created.

By David Talbot

74 Technological Healing

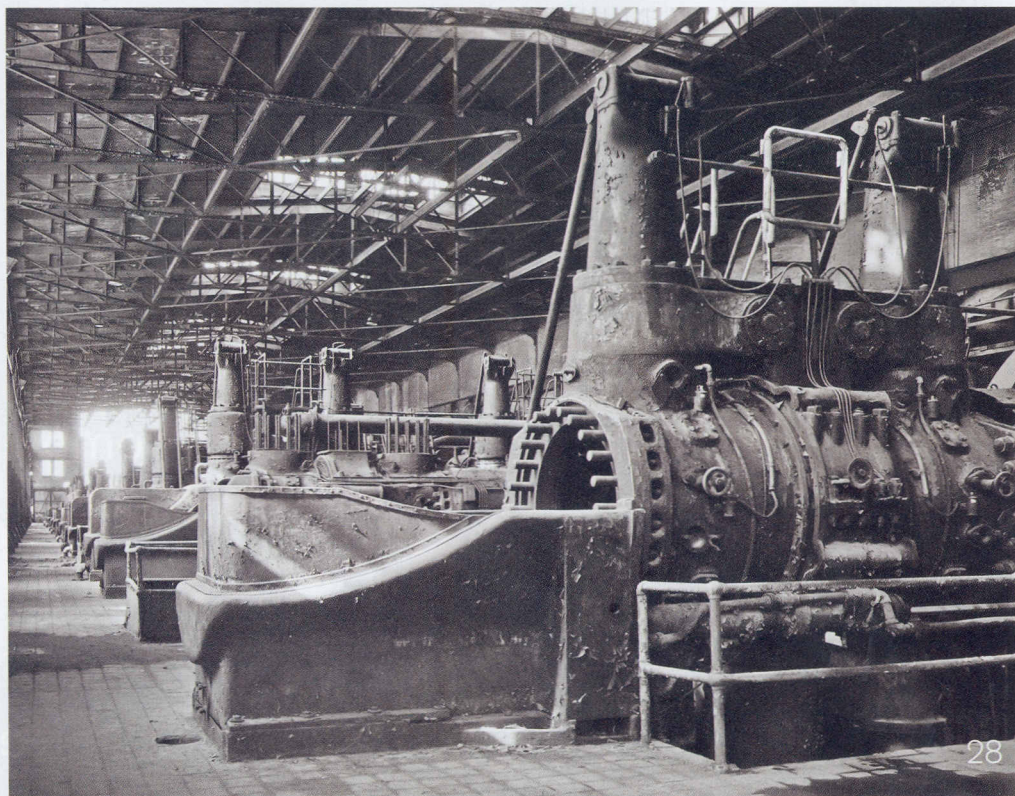

Digital technologies could make health care more efficient. But is so much data beneficial?

By Sharon Begley

76 The Law of Online Sharing

We say we like privacy, but we're sharing personal information at an exponentially growing rate.

By Paul Boutin

28

HACK

78 Eye Ball

A globe studded with cameras captures a panorama when you throw it in the air.

By Stephen Cass

DEMO

80 Nanotech Goes Big

Large sheets made from carbon nanotubes could lead to lighter aircraft and other new possibilities.

By Katherine Bourzac
