FEATURES

- 26 Tagged for Cleansing**
New findings are showing that the ubiquitin system does a lot more than just mop up waste. Howard Hughes Medical Institute investigator MICHELE PAGANO and his colleagues have found that components of this elegant regulatory system also play a crucial role in cell death, circadian cycling, protein synthesis, and other processes.

- 32 A Fading Field**
Traditional taxonomists have become an endangered species, as biologists increasingly rely more on molecular tools and less on field work and morphological study. BOB GRANT asks: As this ancient field fades away, could its unique brand of knowledge disappear, too?

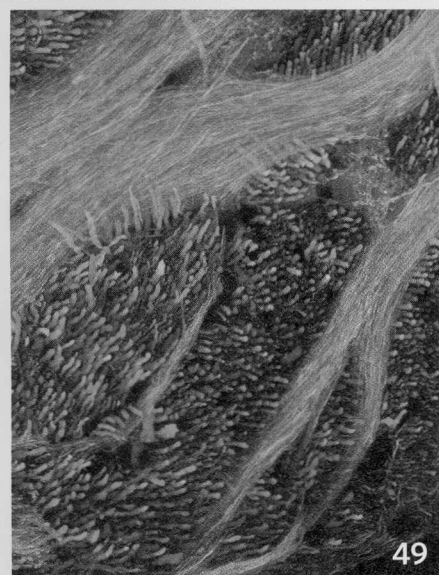

- 39 Best Places to Work in Industry**
Companies atop this year's survey provide their employees with a sense of security in an uncertain economic climate, reports TIA GHOSE. How does your company rank?
