MAGAZINE OF THE LIFE SCIENCES

Clones, Proteins, Antibodies and Assays One Million Gene-focused Products

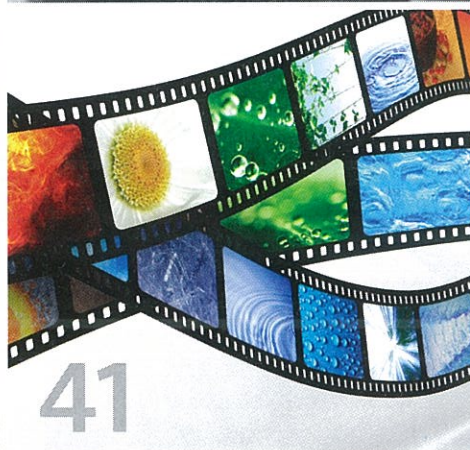

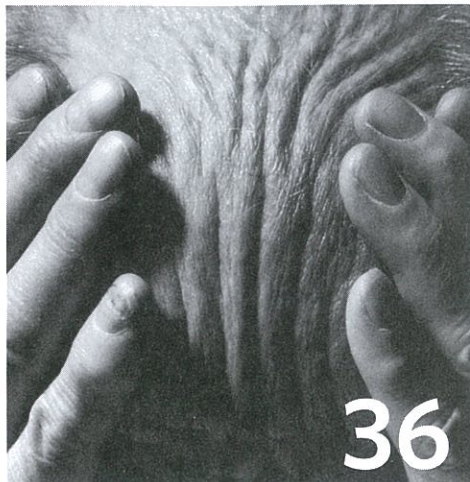

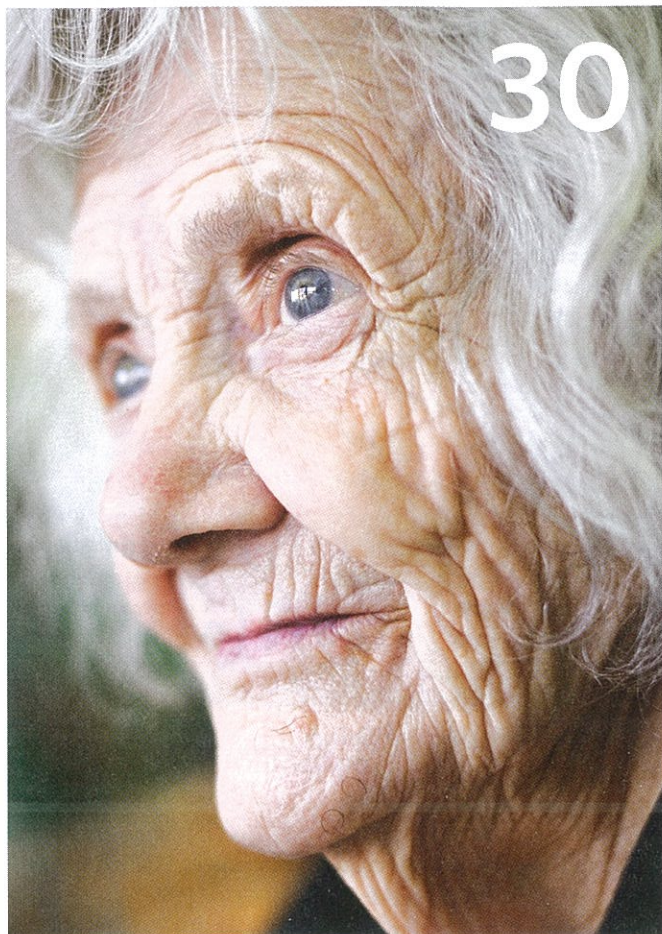

OriGene's Gene-centric Product Philosophy

Building on its industry-leading full-length cDNA clone collections, OriGene has transformed itself into the major source for gene tools. From cDNA clones to proteins, to antibodies, to assays.

Genome wide cDNA clones (H/M/R)	Gain-of-function study Protein production
Gene synthesis via Blue Heron	Synthesize any sequence in any vectors Protein/antibody optimization
12,000 recombinant proteins	Protein function study Assay development
8,000 antibodies, including TrueMAB	Western, IHC, IF, IP, Flow, ELISA Biomarker discovery and validation
Genome wide shRNA, siRNA, and miRNA	Gene knock-down miRNA detection and function

30 Secrets of Aging

What does a normally aging brain look like? Are diseases of aging such as Alzheimer's inevitable?

BY CAROL BARNES

36 What Causes Alzheimer's?

Researchers and pharma companies have tried to attack the disease by reducing amyloid plaques, but inflammation may be the real culprit.

BY W. SUE T. GRIFFIN

41 Showcase Your Science

Tips for creating a science video or website

Plus

Introducing the winners of our second annual Labby Multimedia Awards.

DEPARTMENTS

12 Editorial

Hold That Thought

In the memory circuits of the aging brain and the signaling pathways of pain, science is trading mystery for mastery.

BY MARY BETH ABERLIN

16 Notebook

Octophilosophy; To Pee or Not to Pee; Blood Simple; Adapting to Climate Change

24 Thought Experiment

Puncturing the Myth

Purnergic signaling, not mystical energy, may explain how acupuncture works.

BY GEOFFREY BURNSTOCK

26 Critic at Large

Vive la Différence

Measuring how individual cells differ from each other will enhance the predictive power of biology.

BY H. STEVEN WILEY

28 Modus Operandi

Deep Tissue Treatment

A new, genetically encoded tag for electron microscopy may revolutionize studies of specific proteins in cells and tissues.

BY TIA GHOSE

46 The Literature

Polarized epithelial cells in *Dictyostelium*; virus in *Leishmania* controls severity of infection; ribosomal proteins necessary for vertebrate tissue development

48 Profile

Beyond Expectation

Philippa "Pippa" Marrack has made some unanticipated discoveries about how the immune system functions in health and disease.

BY KAREN HOPKIN

51 Scientist to Watch

Corina Tarnita

BY JESSICA P. JOHNSON

52 Lab Tools

Speak, RNA

A trip through the transcriptome

BY JEFFREY M. PERKEL

55 Careers

Poster Perfect

How to drive home your science with a visually pleasing poster

BY EDYTA ZIELINSKA

68 Reading Frames

What Price Kindness?

Exposing the life and work of a visionary and troubled scientist opens a window onto the evolution of altruism.

BY OREN HARMAN

Capsule Reviews

BY BOB GRANT

72 Foundations

Animal Electricity, circa 1781
