Features

ON THE COVER: PHOTO ILLUSTRATION BY LUCY READING-IKKANDA

34

The Enigmatic Membrane

Despite years of research, the longstanding mystery of where the autophagosome gets its double lipid bilayers is not much clearer.

BY MURIEL MARI, SHARON A. TOOZE, AND FULVIO REGGIORI

40

The War Within

Unraveling the molecular causes of acute pancreatitis—a potentially deadly disease in which the pancreas essentially digests itself—is yielding clues to how it might be treated.

BY OLE H. PETERSEN, OLEG V. GERASIMENKO, AND JULIA V. GERASIMENKO

45

Casting a Wide Eye

Scientists study a variety of large-scale biological phenomena from the vantage point of space.

BY CRISTINA LUIGGI

12 FROM THE EDITOR

On the Menu

Digestion on the cellular level:
two mysteries examined

BY MARY BETH ABERLIN

17 NOTEBOOK

Genghis Jon; Sweet and
Sour Science; Science Afield;
Reading Tea Leaves

26 THOUGHT EXPERIMENT

Ready for Prime Time
Biomarkers of Alzheimer's
disease are ready for widespread
use in clinical trials.

BY DENNIS J. SELKOE
AND JOHN C. MORRIS

29 CRITIC AT LARGE

Never Say Never

Novel observations can
sometimes be correct for
unexpected reasons.

BY H. STEVEN WILEY

30 CRITIC AT LARGE

Learning by Doing

Having freshmen perform
research doesn't just improve
undergraduate learning,
it convinces more students
to become science majors.

BY SARAH L. SIMMONS

33 MODUS OPERANDI

Switching the Bait

Turning a standard technique
into an unbiased screen
for diagnostic biomarkers

BY EDYTA ZIELINSKA

52 THE LITERATURE

ER tubules play role in
mitochondrial division; parasites
degrade proteasomes to feed
themselves; macrophage role in
body temperature regulation

55 SCIENTIST TO WATCH

Rommie Amaro

BY TIA GHOSE

56 LAB TOOLS

Little Squirts

A road map to liquid-handling
solutions on the market

BY AMY MAXMEN

59 CAREERS

Female Frontrunners

How to successfully surmount the
challenges women face in becoming
biotech industry leaders

BY JEF AKST

70 READING FRAMES

Killing with Kindness

Studying the evolution of
altruistic behaviors reveals
how knee-jerk good
intentions can backfire.

BY BARBARA OAKLEY ET AL.

CAPSULE REVIEWS

BY BOB GRANT

64 THE GUIDE

EDITOR'S NOTE: Concerning the characterization of the difference between the digital PCR systems of Bio-Rad and RainDance Technologies as quoted in "Prime Time for Digital PCR" (November/December 2011): Users of the Bio-Rad QX100 system are instructed to seal samples in both pre- and post-PCR environments in order to avoid any chance of cross contamination, and the company reports that extensive system validation has demonstrated no contamination. *The Scientist* regrets any implication that cross-contamination is an issue with the Bio-Rad system and that the company was not given an opportunity to explain this in print.

CORRECTION: In "Top 10 Innovations: 2011," the full name of the #9 winning innovation and company should read LAESI DP-1000 System, Protea Biosciences, Inc. *The Scientist* regrets the error.
