

COVER

A bearded, horned terra cotta mask, about 5 centimeters in height, found at Mohenjo Daro, Pakistan. The artifact, which may have been attached to a puppet, offers a rare glimpse into the 5000-year-old Indus civilization. See page 1276.

REPORTS CONTINUED...

CHEMISTRY

- Identification of Non-Precious Metal Alloy Catalysts for Selective Hydrogenation of Acetylene** 1320

F. Studt et al.

Calculations of heats of adsorption of hydrocarbons on metals guide experiments and show that a nickel-zinc alloy can replace palladium in selectively oxidizing acetylene.

GEOPHYSICS

- The Aftershock Signature of Supershear Earthquakes** 1323

M. Bouchon and H. Karabulut

Destructive earthquakes that ruptured faster than the speed of sound have aftershocks off the fault plane, but not on it, because of the high stresses generated by the shock wave.

PHYSICS

- Multipartite Entanglement Among Single Spins in Diamond** 1326

P. Neumann et al.

Nitrogen vacancy centers in diamond are used to generate and detect 2-qubit and 3-qubit entangled states at room temperature.

PHYSICS

- Strong Dissipation Inhibits Losses and Induces Correlations in Cold Molecular Gases** 1329

N. Syassen et al.

Inducing inelastic collisions in cold gas condensates confined in one-dimensional tubes extends the lifetime of the molecules by more than an order of magnitude. >> *Perspective p. 1300*

CELL BIOLOGY

- Subdiffraction Multicolor Imaging of the Nuclear Periphery with 3D Structured Illumination Microscopy** 1332

L. Schermelleh et al.

Fluorescence tags illuminated through a diffraction grating reveal the structure of nuclear pores, surrounding channels, and chromatin at a resolution of about 100 nanometers.

MOLECULAR BIOLOGY

- Intersection of the RNA Interference and X-Inactivation Pathways** 1336

Y. Ogawa, B. K. Sun, J. T. Lee

Two noncoding RNAs required for X-chromosome inactivation in female mice form a duplex that is cleaved by the RNA interference machine, indicating a link between X inactivation and RNA interference.

MOLECULAR BIOLOGY

- Fission Yeast Pot1-Tpp1 Protects Telomeres and Regulates Telomere Length** 1341

T. Miyoshi, J. Kanoh, M. Saito, F. Ishikawa

Yeast chromosome ends are protected by a protein complex similar to that in mammals, which prevents end-to-end chromosome fusion and controls telomere length.

>> *Perspective p. 1301*

MOLECULAR BIOLOGY

- The Transcriptional Landscape of the Yeast Genome Defined by RNA Sequencing** 1344

U. Nagalakshmi et al.

A more complete catalog of transcribed DNA of yeast is assembled by shotgun sequencing of messenger RNA and reveals numerous previously unknown transcribed regions.

DEVELOPMENTAL BIOLOGY

- The Transcription/Migration Interface in Heart Precursors of *Ciona intestinalis*** 1349

L. Christiaen et al.

In embryonic cells destined to form the heart in a simple chordate, a genetic network activates modules of effector genes for proteins that control cellular migration.

NEUROSCIENCE

- High Impulsivity Predicts the Switch to Compulsive Cocaine-Taking** 1352

D. Belin et al.

Rats that are more impulsive, but not those that seek novelty, tend to compulsively consume cocaine and become addicted.

>> *Science Podcast*

NEUROSCIENCE

- Patches with Links: A Unified System for Processing Faces in the Macaque Temporal Lobe** 1355

S. Moeller, W. A. Freiwald, D. Y. Tsao

The six regions of the macaque cortex that respond to faces are strongly and specifically interconnected, indicating hierarchical processing of face stimuli.
