ASTROPHYSICS

20 Black Stars, Not Holes

By Carlos Barceló, Stefano Liberati, Sebastiano Sonego and Matt Visser

Quantum effects may prevent true black holes from forming and give rise to entities called black stars.

NEUROSCIENCE

28 Turbocharging the Brain

By Gary Stix

Will a pill at breakfast improve concentration and memory—and will it do so without long-term detriment to your health?

ENERGY

36 Squeezing More Oil from the Ground

By Leonardo Maugeri

Amid warnings of a possible “peak oil,” advanced technologies offer ways to get every last possible drop.

ARCHAEOLOGY

44 Lost Cities of the Amazon

By Michael J. Heckenberger

The Amazon tropical forest is not as wild as it looks.

MEDICINE

52 Boosting Vaccine Power

By Nathalie Garçon and Michel Goldman

Modern insights into the immune system have revived interest in a set of ingredients that can supercharge old vaccines and make entirely new ones possible.

SECURITY

60 Privacy and the Quantum Internet

By Seth Lloyd

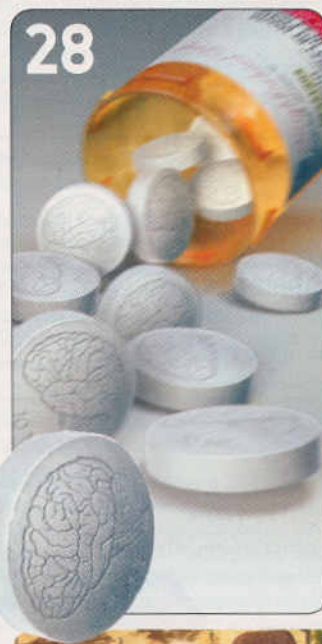

Courtesy of some of the weirdest laws of physics, we may someday be able to search and surf the Web without anyone collecting our data.

INDUSTRY PERSPECTIVES

64 Biotech's Plans to Sustain Agriculture

A discussion hosted by Scientific American

Popular movements may call for more organic methods, but the agricultural industry sees biotechnology as a crucial part of farming's future.

ON THE COVER

Cognitive enhancers, drugs that promise to sharpen focus and memory, have hit the headlines recently. But do they work? And are they a good idea? Image by Aaron Goodman.

- 4 From the Editor
