ASTRONOMY

22 The Long-Lost Siblings of the Sun

By Simon F. Portegies Zwart
The sun was born in a family of stars.
What became of them?

NEUROSCIENCE

30 New Culprits in Chronic Pain

By R. Douglas Fields
Glia are nervous system caretakers whose nurturing can go too far. Taming them holds promise for alleviating pain that current medications cannot ease.

ENERGY

38 A Path to Sustainable Energy by 2030

By Mark Z. Jacobson and Mark A. Delucchi
Wind, water and solar technologies can provide 100 percent of the world's energy, eliminating all fossil fuels. Here's how.

HUMAN EVOLUTION

46 Rethinking the Hobbits of Indonesia

By Kate Wong
New analyses reveal the mini human species to be even stranger than previously thought and hint that major tenets of human evolution need revision.

INFORMATION TECHNOLOGY

54 The Everything TV

By Michael Moyer
The Internet stands ready to upend the television-viewing experience, but exactly how is a matter of considerable dispute.

SUSTAINABILITY

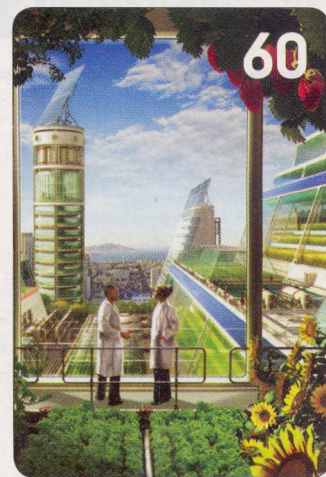

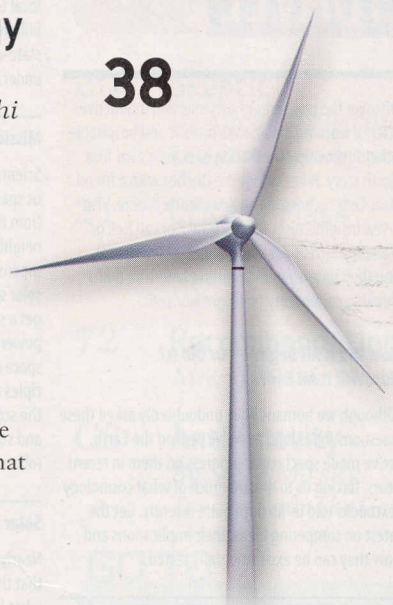

60 The Rise of Vertical Farms

By Dickson Despommier
Growing crops in city skyscrapers would use less water and fossil fuel than outdoor farming, eliminate agricultural runoff and provide fresh food.

AUTOMOTIVE TECHNOLOGY

68 The Future of Cars

An interview by Stuart F. Brown
Industry leaders look way down the road.

ON THE COVER

A common perception is that it is impossible to provide for all energy needs with renewable sources. But the math suggests otherwise. Image by Jean-Francois Podevin.

4 From the Editor

5 Letters

7 50, 100 & 150 Years Ago

8 Ask the Experts

How does the Coast Guard find people lost at sea?

10 News Scan

MEDICINE & HEALTH

- Schizophrenia and the environment.
- Swine flu shots from 1976 still protect you.
- Human eggs become a research commodity.

ENERGY & ENVIRONMENT

- Novel analysis confirms "hockey stick" graph.
- Carbon gets stuffed under the ground.

RESEARCH & DISCOVERY

- How noise can help quantum entanglement.
- A sighting of magnetic monopoles.

TECHNOLOGY

- Nascent industry fights phosphorus pollution.

18 Perspectives

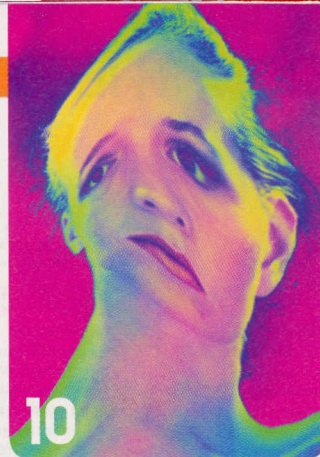

By the Editors

In Copenhagen the U.S. can lead the world to a historic emissions agreement by committing to its own sweeping energy transformation.

19 Sustainable Developments

By Jeffrey D. Sachs

The recent car-upgrade program is an example of how not to address CO₂ reduction prudently.

20 Skeptic

By Michael Shermer

Evolution helps us imagine what aliens might look like.

21 Critical Mass

By Lawrence Krauss

How women can save the planet.

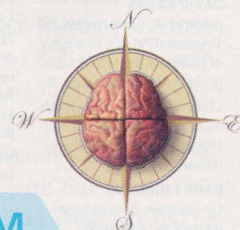

72 Recommendations

African wildlife. Nuclear proliferation. Ancient alcohol.

C3 Anti Gravity

By Steve Mirsky

Galileo, 400 Years Later

In November 1609
Italian astronomer
Galileo Galilei built a high-
power telescope and began his landmark
studies of the moon, part of a series of observa-
tions that forever changed our view of the heavens.
