PLANETARY SCIENCE

20 The Moon That Would Be a Planet

By Ralph Lorenz and Christophe Sotin
Titan, Saturn's largest natural satellite, has an atmosphere thicker than Earth's and a surface that is almost as varied.

NEUROSCIENCE

28 The Brain's Dark Energy

By Marcus E. Raichle
Brain regions active when we allow our minds to wander may hold a key to understanding neurological disorders and even consciousness itself.

ENERGY

34 Fusion's False Dawn

By Michael Moyer
As a historic milestone nears, skeptics question whether it will ever be possible to build a working fusion reactor that could supply virtually unlimited clean energy.

GEOLOGY

42 Evolution of Minerals

By Robert M. Hazen
Looking at the mineral kingdom through the lens of deep time leads to a startling conclusion: most mineral species owe their existence to life.

MEDICINE

50 Toxic Gas, Lifesaver

By Rui Wang
Though lethal, hydrogen sulfide turns out to play key roles in the body—a finding that could lead to new treatments for heart attack victims and others.

ANIMAL BEHAVIOR

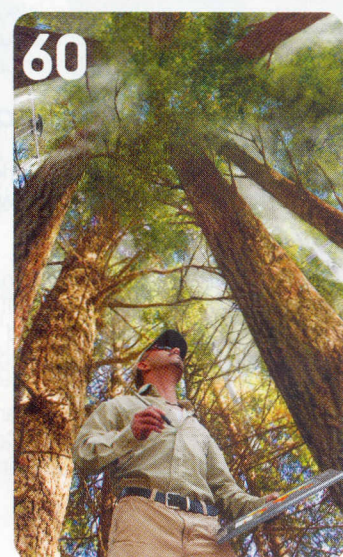

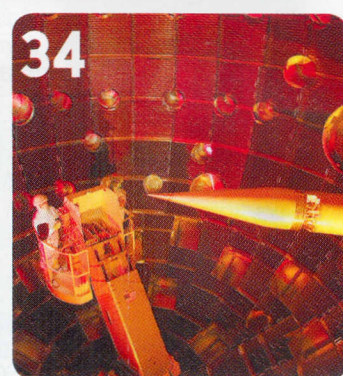

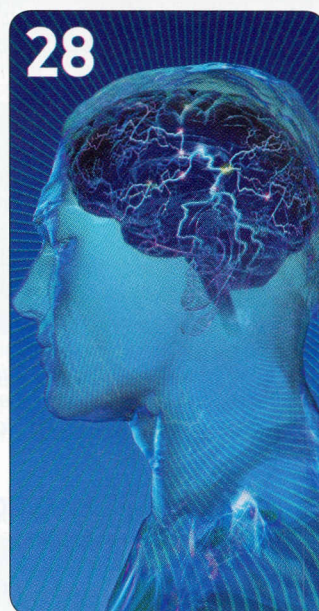

56 Worm Charmers

By Kenneth Catania
Follow an intrepid scientist as he learns why earthworms rush to the surface when bait hunters rub a piece of metal across a stick poked into the ground.

ENVIRONMENT

60 Climate Change: A Controlled Experiment

By Stan D. Wullschlegel and Maya Strahl
Scientists have manipulated grasslands and forests to see how precipitation, carbon dioxide and temperature changes will affect the future of the biosphere.

ON THE COVER

Remarkably, the brain carries out a great deal of meaningful activity all the time, even when a person is sitting back and doing nothing at all. Image by Aaron Goodman.

8 News Scan

ENERGY & ENVIRONMENT

- A move to get bluefin tuna off the menu.
- The U.S. East Coast: a good place for CO₂.

MEDICINE & HEALTH

- Vitamin C boosts stem cell production.
- Mutant cholesterol staves off dementia.

RESEARCH & DISCOVERY

- Neandertal jewelry suggests high-level thinking.
- Reform math or old school?
- Black holes and dark matter.

TECHNOLOGY

- A flying motorcycle by 2011?
- Sensing the South Pole remotely.

16 Perspectives

By the Editors

Excellence in science education can—and should—begin in kindergarten.

17 Sustainable Developments

By Jeffrey D. Sachs

Breaking the climate change logjam.

The Stimulus Package and Science

It's been a year since President Barack Obama signed the American Recovery and Reinvestment Act of 2009 into law. So what has the stimulus money done for the science community?
