SCIENTIFIC AMERICAN

December 2010 Volume 303, Number 6

ON THE COVER

This year's edition of World Changing Ideas explores the leading ways that technology and innovation can create a healthier, cleaner, smarter world, from biologically inspired algorithms to vegetarian robots to a cheap nanotech-based water filter. Photograph by Mark Hooper.

FEATURES

INNOVATION

20 World Changing Ideas

A special report on thoughts, trends and technologies that have the power to change our lives.

PHYSICS

30 A Geometric Theory of Everything

Deep down, the particles and forces of the universe are a manifestation of exquisite geometry. *By A. Garrett Lisi and James Owen Weatherall*

PALEONTOLOGY

38 Blood from Stone

Mounting evidence from dinosaur bones (such as "Big Mike's," shown above) shows that, contrary to common belief, soft tissue can survive in fossils for millions of years. *By Mary H. Schweitzer*

BIOLOGY

46 Life Unseen

The biological world reveals microscopic landscapes of surprising beauty. *By Davide Castelvecchi*

HEALTH

52 Hallucinogens as Medicine

In a matter of hours, mind-altering substances may induce the profound psychological realignments that can take

decades to achieve on a therapist's couch. *By Roland R. Griffiths and Charles S. Grob*

INFORMATION SCIENCE

56 Long Live the Web

In an exclusive essay, the Web's inventor argues that protecting the Web is critical not merely to the digital revolution but to our continued prosperity—and even our liberty. *By Tim Berners-Lee*

LIFE SCIENCE

62 Jane of the Jungle

Primatologist Jane Goodall shares insights from her 50 years among the chimpanzees of Gombe. *Interview by Kate Wong*

SPACE EXPLORATION

64 Jump-Starting the Orbital Economy

For the first time in five decades, NASA will soon be out of the astronaut-launching business. The only way to save manned spaceflight may be to outsource it to private companies. *By David H. Freedman*

ROBOTICS

70 Cyborg Beetles

Tiny flying robots that are part machine and part insect may one day save lives in wars and disasters. *By Michel M. Maharbiz and Hirotaka Sato*

SCIENTIFIC AMERICAN

DEPARTMENTS

2 From the Editor

4 Letters

6 Science Agenda

The laws of physics are the least of NASA's challenges.

By the Editors

7 Forum

Truth, witnesses and brain scans. *By Hank Greely*

8 Advances

Exoplanetary life. Malaria genetics. Beer foam math. Science books and toys for kids. Proving Hawking right. Wireless body armor. Jellyfish propulsion.

16 The Science of Health

Do exercising and quitting smoking delay the onset of dementia? *By Christine Gorman*

18 TechnoFiles

Speech-recognition software has quietly grown tendrils into every corner of our lives. *By David Pogue*

76 Recommended

Eye-catching books for holiday gift-giving.

By Kate Wong

77 Skeptic

The difference between true and false conspiracy theories. *By Michael Shermer*

78 Anti Gravity

A mind is a terrible thing to your waist. *By Steve Mirsky*

79 50, 100 & 150 Years Ago

80 Graphic Science

Smart controls can rebuild collapsed fisheries.

By Mark Fischetti

ON THE WEB

Tour Seven Amazing Exoplanets

Astronomers are turning up exoplanets in droves, but what do these distant worlds look like? Hugo Award-winning artist Ron Miller interprets the data to give us a glimpse.
