SPECIAL REPORT: GAS PROCESSING DEVELOPMENTS

- 29 Advanced mercury removal technologies**
New technologies can cost-effectively treat 'wet' and 'dry' natural gas while protecting cryogenic equipment
N. Eckersley
- 37 A unique natural gas processing success story**
Cost-effective expansion created high reliability operations
C. Baker and T. Barnette
- 39 Equilibrium considerations in choosing a gas treating amine**
Pursue these guidelines to understand solubility
S. A. Bedell
- 43 Designing a selective MDEA tail-gas treating unit**
Following these protocols will enhance sulfur recovery efficiency
S. Nagpal

ENVIRONMENT

- 49 When does carbon capture make sense?**
Here are several options in which carbon capture can provide cost-effective solutions
S. Ferguson

MAINTENANCE/RELIABILITY

- 55 Managing costs and incidents in industrial plant equipment**
Use this method to allocate limited maintenance resources to the most critical equipment
M. Gardella, E. Egusquiza, X. Escaler and A. Goti

PLANT SAFETY AND ENVIRONMENT

- 63 Designing for pressure safety valves in supercritical service**
Use this rigorous method to prevent over-sizing
R. C. Doane

PIPING

- 69 New explicit friction factor equation for turbulent flow in smooth pipes**
A simple, explicit and high-accuracy equation is presented
A. Sasan-Amiri

INSTRUMENTATION

- 71 Implement a constrained optimal control in a conventional level controller—Part 1**
Novel tuning method enables a conventional PI controller to explicitly handle the three important operational constraints of a liquid level loop in an optimal manner as well as copes with a broad range of level control from tight to averaging control
M. Lee, J. Shin and J. Lee

ENGINEERING CASE HISTORIES

- 77 Case 54: Is it motor vibration or some other cause?**
It's not always the motor causing the vibration
T. Sofronas

DEPARTMENTS

- 7 **HPI** BRIEF • 15 **HPI** IMPACT • 19 **HPI** INNOVATIONS •
23 **HPI** CONSTRUCTION • 24 **INDUSTRY FORECAST FORUM** •
25 **LETTERS TO THE EDITOR** • 27 **HPI** CONSTRUCTION BOXSCORE UPDATE •
78 **HPI** MARKETPLACE • 81 **ADVERTISER INDEX**

Cover Darwin LNG, located at Wickham Point, Darwin Australia began operation in 2006. This 3.7 MTPA facility, which employs the ConocoPhillips Optimized Cascade Process, established new design benchmarks for LNG facilities by being the first to apply high efficiency aeroderivative gas turbines and the first to use inlet air humidification to enhance production during periods of low humidity.

HPI IMPACT

- 15 **Struggles for US refiners expected to continue**
17 **The EU's ETS at a glance**

COLUMNS

- 9 **HPI** N RELIABILITY
More about unreliability, global procurement and you
- 11 **HPI** N EUROPE
Duh! Business as usual will not be good for the HPI
- 13 **HPI** NTEGRATION STRATEGIES
Applying tuneable diode laser spectroscopy to help reduce energy consumption
- 82 **HPI** N WATER MANAGEMENT
Wastewater discharge permits; What should you know?
