U. S. Registered Trademarks	2
Introduction to Rubber Compounding	11
1. Commercial Natural and Synthetic Rubbers	
Natural Rubber	13-39
Terminology for Synthetic Rubbers	40
Butadiene-Styrene Rubbers	41-59
Neoprene	60-70
Nitrile Rubbers	71-87
Butyl Rubber	88-101
Reclaimed Rubber	102-115
Polysulfide Polymers	116-124
Silicone Elastomers	125-135
Fluorocarbon Elastomers	136-146
Hypalon Synthetic Rubber	147-148
High Styrene Resins	149-152
2. Compounding Materials and Uses	
Fundamentals of Compounding	154-157
Classification of Compounding Materials	
Vulcanizing Agents	158-159
Accelerators	159-162
Accelerator Activators	162
Age Resisters and Protective Materials	163-164
Plasticizers, Softeners, Tackifiers	164-165
Reinforcing Pigments and Fillers	165
Miscellaneous Materials	166
Vanderbilt Materials for Rubber Manufacture	
Thiazole Accelerators	168-171
Thiuram Accelerators	172-174
Accelerators for Neoprene	175
Dithiocarbamate Accelerators	176-182
AGERITE Antioxidants	183-188
Thermatomic Carbons	189
Mineral Fillers	190-191
Petroleum Base Plasticizers	192
Organic Modifiers	193
Secondary Vulcanizing Agents	194

	page
Reodorants	194
Releasing Agents	195
Fungicides	195
Finishing Materials	196
Bonding Agents, Cover Cements	197
Offices and Warehouses	198
 3. Compound Properties and Test Methods	
Uncured Properties	
Plasticity, Recovery, Scorch	200-208
Original Properties of Vulcanizates	
Specific Gravity	209-210
Tensile Properties	211
Hardness	212-213
Tear Resistance	214
Abrasion Resistance	214-215
Flex Resistance	216-218
Compression Set	219
Resilience and Heat Buildup	220-222
Oil, Solvent, Chemical Resistance	223
Low Temperature Properties	223
Aging Properties and Tests	
Heat Aging	224-226
Oxygen Pressure and Air Bomb Aging	226-227
Natural vs. Accelerated Aging	228-229
Weathering Tests	230-232
Ozone Cracking Tests	232-236
 4. Compound Design	
Properties of Compounded Rubbers	238-239
Natural Rubber	
Base Compound Design	240
Loading Material Comparison	241-242
Thiazole Accelerator Comparison	243-245
Ultra Accelerator Comparison as Primaries	246-248
Heat Resistant Rubber Accelerations	249
Ultra Accelerators as Secondaries	250-251

	page
Antioxidant Comparison	252-254
Processing Aids	255
SBR	
Base Compound Design	256
Loading Material Comparison	257-262
Thiazole Accelerator Comparison	263
Ultra Accelerator Comparison as Primaries	264-265
Ultra-Thiazole Combination Accelerations	266-267
Ultra Accelerators as Secondaries	268-269
Heat Resistant Curing Systems	270
Antioxidant Comparison	271
Processing Aids	272
Neoprene	
Base Compound Design	273
Loading Material Comparison	274-275
Antioxidant Comparison	276-277
Ultra Accelerator Applications	278
Butyl Rubber	
Base Compound Design	279
Loading Material Comparison	280-288
Sulfurless Curing Systems	289
Ultra Accelerator Comparison	290-291
Nitrile Rubber, Base and Loading Comparison	292
5. Laboratory Examination of Compounding Materials and Rubber Products	
Vanderbilt Laboratory Test Methods	
Moisture, Heating Loss	294
Melting Range	294-295
Ash	295
Softening Point	295
Set Point	295-296
Beta Naphthol Content	296
Specific Gravity (Direct Weight, Hydrometer)	296
Fineness	296-297
Acid Number	297
Copper Content in CUMATE Accelerator	297
pH	297

	page
Lead Content	297-298
Flash Point	298
Specific Gravity (Pycnometer)	298
Benzol Extract	299
Free Sulfur	299
Petroleum Ether Extract	300
Tellurium	300
Selenium	300
Zinc	301
Bismuth	301
Solubility	301
Chemical Identification and Analysis of Rubber Products and Compounding Materials	
Identification of Elastomers	302-304
Sulfur Determination (Quantitative)	305-306
Tellurium and Selenium (Quantitative)	306-307
Tests for Copper and Manganese	307-309
Mineral Filler Examination	309
Sulfur, Microscopic Identification	309
Accelerator and Antioxidant Identification	310-317
Infrared Spectroscopy	318-324
X-Ray Diffraction Methods in Rubber Testing	325-333
The Electron Microscope and its Application in Rubber Testing and Research	334-342
Electrical Testing of Rubber Compounds	343-360
Statistical Quality Control	361-365
6. Articles of Theoretical Interest	
Vulcanization	366-377
Aging of Vulcanized Elastomers	378-385
7. Processing Methods and Equipment	
Processing Operations and Problems	387-388
Breakdown and Mixing Problems	389-391
Calendering and Extruding	391-393
Stock Preparation for Vulcanization	394
Molding Operations and Equipment	395-398
Injection Molding	399

	page
Open Steam Curing	400
Dry Heat Curing	401
Vulcanization Temperature Control	402-407
Flow Diagram of Rubber Manufacture	408-409
8. Commercial Rubber Products and Processes	
Pneumatic Tire Compounding	412-425
Belting	426-434
Hose	435-442
Molded Rubber Products	443-454
Rubber Tile and Matting	455
Extruded Products	456-462
Sponge Rubber	463-464
Hard Rubber	465-468
Rubber Covered Rolls	469-470
Footwear	471-476
Soles, Heels and Top Lifts	477-486
Wire and Cable Compounding and Processing	487-502
Coated Fabrics	503-507
Rubber-to-Metal Bonding	508-515
Yarns and Fabrics for Mechanical Rubber Goods	516-520
9. General Information	
ASTM D15 and D412 Procedures for Laboratory Compounding and Tension Testing	522-523
Key to: Rubber and Synthetic Rubber Compounds for Automotive and Aeronautical Applications	524-527
Hardness Measurement Equivalents	528
Specific Gravity and Specific Volume Calculation Methods	529
Volume Cost Calculations	530
Designing Compounds by Volume	530
Specific Gravity and Specific Volume —of Vanderbilt Compounding Materials	531-532
—of Other Compounding Materials	533-535
Specific Gravity Calculation Table	536-539
Designing Rubber or SBR Compounds by Volume (Table)	540-543

	page
Ounces/Cu. In. at Various Sp. Gravities	544
Lbs./Cu. Ft. at Various Sp. Gravities	545
Cu. Ft./100 Lbs. at Various Sp. Gravities	546
Lbs./Sq. Yd. of Sheet Rubbers	547-548
Hose Tube and Cover Weights (Lbs./100 Ft., Sp. Gr. 1.0)	549
Tubing Weights (Lbs./100 Ft., Sp. Gr. 1.0)	550
Disc Weights	
—Pounds, Sp. Gr. 1.0	551-552
—Grams, Sp. Gr. 1.0	553
Fabric Weight Conversion Table (Linear to Sq. Yards)	554
Mixing Equipment Sizes, Capacities, Power Requirements	555
Time—Temperature Relations in Vulcanization	
Temperature Coefficient Explanation	556
Cure Conversion Chart	557
Common and Chemical Names of Various Materials	558-563
Properties of Various Liquids	564-565
Baumé, Specific Gravity Conversion Table	566
Temperature Conversion Table	567-570
Tensile Strength Conversion Table, U. S.-Metric	571-573
Liquid Weights and Measures Conversion Table	574
Interconversion Tables, Weights and Measures	
Single Units, U. S.-Metric, Metric-U. S.	575
Double Units, U. S.-Metric, Metric-U. S.	576
Miscellaneous U. S. Units	577
Temp.-Pressure Equivalents of Saturated Steam	578-580
Standard Sieves, ASTM E11	581
Wire and Sheet Metal Gages	582
Common Fractions, Decimals and Millimeters	583
Relative Humidity Table	584-585
Circumferences and Areas of Circles	586-587
Mensuration Formulas	588
Useful Factors and Constants	589
Associations and Institutions	590
A Selection of Rubber Literature	591-593
Vanderbilt Rubber Laboratory Location	594-595
