Contributor contact details.....	xiii
Preface.....	xviii

Part I Biobased food packaging materials: new directions

1 State-of-the-art biobased food packaging materials.....	3
<i>G. Robertson, University of Queensland, Australia</i>	
1.1 Introduction: biobased packaging, the food industry and the environment.....	3
1.2 Classification of biobased food packaging materials.....	7
1.3 Properties of biobased food packaging materials.....	14
1.4 Assessing the biodegradability of biobased materials for food packaging.....	19
1.5 Applications and challenges for biobased food packaging.....	21
1.6 Future trends.....	22
1.7 Sources of further information and advice	23
1.8 References.....	24
2 Types, production and assessment of biobased food packaging materials.....	29
<i>S. Imam, G. Glenn, B.-S. Chiou, J. Shey, R. Narayan and W. Orts, USDA-ARS-PW-WRRC, USA</i>	

2.1	Introduction: rationale and need for biobased food packaging	29
2.2	The environmental impact of conventional food packaging.....	30
2.3	Opportunities for renewable polymers	32
2.4	Production of biobased food packaging materials.....	37
2.5	Hybrid blends and composites	41
2.6	New developments in the production of packaging from recycled lignocellulosic fiber and renewable materials.....	44
2.7	Assessing the biodegradability of renewable materials in food packaging	46
2.8	Biodegradable packaging life cycle assessment	52
2.9	Food safety concerns, applications and adoption by the industry	53
2.10	Future trends.....	55
2.11	Sources of further information and advice	56
2.12	References	57
3	Thermoplastic nanobiocomposites for rigid and flexible food packaging applications	63
	<i>J. Lagaron and M. Sanchez-Garcia, Institute of Agrochemistry and Food Technology, Spain;</i>	
	<i>E. Gimenez, ESID, University Jaume I, Castellon, Spain</i>	
3.1	Introduction: plastic food packaging, sustainable materials and barrier properties	63
3.2	'Barrier properties' limit the use of plastics in monolayer packaging.....	65
3.3	Novel developments in barrier polymeric structures	69
3.4	Polymer blends: the case of permeable fillers	71
3.5	Nanocomposites: the case of impermeable fillers.....	73
3.6	Nanobiocomposites for monolayer packaging: polylactic acid, polycaprolactone, polyhydroxyalkanoate and starch	78
3.7	Future trends and outlook	82
3.8	Nomenclature.....	82
3.9	References	83
4	Improved fibre-based packaging for food applications.....	90
	<i>J. Poustis, JPC Packaging Institute, France</i>	
4.1	Introduction.....	90
4.2	Properties and uses of fibre-based food packaging	93
4.3	Innovative methods to improve fibre-based packaging for food applications	95

4.4	Suitability of new fibre-based packaging materials for food packaging	96
4.5	Assessing the biodegradability of new fibre-based packaging materials for food packaging.....	102
4.6	Applications and future trends in the food industry.....	103
4.7	Sources of further information and advice.....	107
4.8	References.....	107
5	Starch-based edible films.....	108
	<i>Y. Zhang and Z. Liu, University of Manitoba, Canada; J. Han, Frito-Lay, Inc., USA</i>	
5.1	General properties and structure of starch.....	108
5.2	History of edible films	110
5.3	Edible film materials and their previous applications.....	111
5.4	Starch film-forming mechanisms – gelatinization and recrystallization	112
5.5	Appearance and physical properties of starch films.....	118
5.6	Plasticization of starch films.....	126
5.7	Trends in starch research and applications.....	132
5.8	References.....	133
6	The use of chitin and chitosan for food packaging applications.....	137
	<i>I. S. Arvanitoyannis, University of Thessaly, Greece</i>	
6.1	Introduction.....	137
6.2	Mechanical properties.....	138
6.3	Thermal properties.....	146
6.4	Gas permeability	149
6.5	Water permeability.....	154
6.6	Conclusions	156
6.7	References.....	157
 Part II Using environmentally compatible packaging technologies in the food industry		
7	Consumer attitude to food packaging and the market for environmentally compatible products.....	161
	<i>I. S. Arvanitoyannis and A. Kasaveti, University of Thessaly, Greece</i>	
7.1	Introduction.....	161
7.2	Packaging materials.....	163
7.3	'Green' packaging	164
7.4	Disposal of packaging materials.....	164
7.5	Recycling of packaging materials.....	166

7.6	New packaging technologies.....	168
7.7	Food packaging regulation in the European Union.....	170
7.8	The study of consumer behaviour.....	171
7.9	Conclusions	178
7.10	References.....	179
8	Environmental assessment of food packaging and advanced methods for choosing the correct materials.....	182
	<i>K. Verghese, RMIT University, Australia</i>	
8.1	Introduction.....	182
8.2	Modern day lifestyle conflicts and demands from the retail sector.....	183
8.3	Recognition of the environmental impacts of packaging in the food industry	185
8.4	Environmental assessment of food packaging systems.....	188
8.5	Environmental assessment tools for food packaging systems	190
8.6	Sustainable packaging developments	204
8.7	Implementing environmental assessment approaches into the product-packaging system development process.....	204
8.8	Future trends.....	204
8.9	Sources of further information and advice.....	205
8.10	References.....	209
9	Measuring the environmental performance of food packaging: life cycle assessment	211
	<i>G. Parker, Ciba Expert Services, UK</i>	
9.1	Introduction.....	211
9.2	Environmental performance of biopolymers	212
9.3	Measuring environmental impacts: the science of life cycle assessment.....	217
9.4	Results of existing life cycle assessment studies of biopolymers	229
9.5	Measuring the environmental performance of packaging: future trends	234
9.6	Sources of further information and advice.....	236
9.7	References.....	237
10	Eco-design of food packaging materials	238
	<i>H. Lewis, RMIT University, Australia</i>	
10.1	Introduction.....	238
10.2	Key drivers of eco-design of food packaging materials.....	239
10.3	Eco-design strategies for food packaging materials	241
10.4	Future trends.....	258
10.5	Conclusions	258

10.6	Sources of further information and advice	259
10.7	References	259
11	Additives for environmentally compatible active food packaging	263
	<i>S. Irmak and O. Erbatur, Cukurova University, Turkey</i>	
11.1	Introduction.....	263
11.2	Antimicrobial/antioxidant agents incorporated into polymers.....	265
11.3	Chemical preservatives.....	265
11.4	Peptides and proteins.....	266
11.5	Polysaccharides	268
11.6	Natural antimicrobial/antioxidant compounds from plant sources.....	270
11.7	Extraction and fractionation techniques for antimicrobial/antioxidant compounds from plant sources.....	273
11.8	Antimicrobial and antioxidant tests	276
11.9	Suitability of new coatings and adhesives for food packaging	279
11.10	Incorporation of antimicrobials/antioxidants into polymer materials.....	280
11.11	Applications in the food industry	282
11.12	Future trends.....	283
11.13	References	284
12	Recycling of food packaging materials: an overview	294
	<i>D. Dainelli, Sealed Air Corporation, Italy and EuPC (European Plastics Converters Association), Belgium</i>	
12.1	Introduction.....	294
12.2	Regulation of recycling of food packaging materials.....	295
12.3	Recycling paper food packaging: collection, separation and processing.....	299
12.4	Recycling plastic food packaging: collection, separation and recovery	305
12.5	Recycling of other materials.....	314
12.6	Supply chain management to reduce packaging waste.....	319
12.7	Conclusions	322
12.8	References	324
13	Recycled plastics for food applications: improving safety and quality	326
	<i>V. Komolprasert and A. Bailey, Food and Drug Administration, USA</i>	
13.1	Introduction.....	326
13.2	Plastic food packaging and the environment	327

13.3	The recyclability of packaging plastics	328
13.4	Recycling processes	330
13.5	Improving the recyclability of plastic packaging for food use	331
13.6	The safety and quality of recycled plastics	336
13.7	The use of recycled plastics in the food industry	345
13.8	Future trends	346
13.9	References	347
14	Recycled paper and board for food applications: improving safety and quality	351
	<i>C. Nerín, I3A, CPS, University of Zaragoza, Spain</i>	
14.1	Introduction	351
14.2	The recyclability of paper and board	352
14.3	Improving the recyclability of paper and board packaging	358
14.4	Testing the safety and quality of recycled paper and board	359
14.5	Future trends	364
14.6	Sources of further information and advice	365
14.7	References	367
Part III	Environmentally compatible food packaging for particular applications	
15	Overview of environmentally compatible polymeric materials for food packaging	371
	<i>E. Chiellini, A. Barghini, P. Cinelli and V. I. Ilieva, University of Pisa, Italy</i>	
15.1	Introduction	371
15.2	Polymers from renewable resources	372
15.3	Multilayer packaging films	376
15.4	Technology for biobased polymer processing	377
15.5	Economic issues regarding biodegradable polymers	379
15.6	Conclusions	388
15.7	Sources of further information and advice	389
15.8	References	390
16	Modified atmosphere packaging using environmentally compatible and active food packaging materials	396
	<i>C. Guillaume, P. Chalier and N. Gontard, University of Montpellier II, France</i>	
16.1	Introduction	396

16.2	Modified atmosphere packaging of fruit and vegetables: using proteins to control gas transport phenomena through paper-based materials	397
16.3	Antimicrobial modified atmosphere packaging: antimicrobial properties of aroma compounds and their controlled release using the paper coating agent as an inclusion matrix.....	403
16.4	Future trends.....	414
16.5	References	415
17	Active environmentally compatible food packaging	419
	<i>R. Catalá, P. Hernández-Muñoz and R. Gavara, IATA-CSIC, Spain</i>	
17.1	Introduction.....	419
17.2	Basic characteristics of active packaging	420
17.3	Biopolymer-based active materials for food packaging.....	422
17.4	Future trends.....	432
17.5	References	433
18	Biobased intelligent food packaging	439
	<i>P. Taoukis, National Technical University of Athens, Greece; M. Smolander, VTT Technical Research Centre of Finland, Finland</i>	
18.1	Introduction.....	439
18.2	Biobased tools for the detection of quality-indicating metabolites.....	440
18.3	Biobased tools for the detection of pathogenic and microbial contamination	444
18.4	Biobased indicators for monitoring the time-temperature history	446
18.5	Other intelligent packaging systems utilising biomolecules.....	450
18.6	Future trends.....	451
18.7	References	452
19	Environmentally compatible packaging of fresh agricultural and horticultural produce	459
	<i>C. Bishop and S. Hanney, Writtle College, UK</i>	
19.1	Introduction.....	459
19.2	Specific challenges for fresh produce packaging.....	463
19.3	Industry response	464
19.4	Storage of packaging material	468
19.5	Supply chain.....	470

19.6	Reducing the environmental impact of secondary packaging – returnable plastic crates.....	471
19.7	Conclusions	475
19.8	References.....	476
20	Biobased packaging of dairy products	478
	<i>M. Jakobsen, University of Copenhagen, Denmark;</i>	
	<i>V. Holm, Danish Technological Institute, Denmark;</i>	
	<i>G. Mortensen, Danish Dairy Board, Denmark</i>	
20.1	Introduction.....	478
20.2	Properties required in relation to dairy products.....	479
20.3	Current applications of biopackaging of dairy products	485
20.4	Future trends.....	489
20.5	Sources of further information and advice	491
20.6	References.....	492
21	Environmentally friendly packaging of muscle foods	496
	<i>P. Dawson, K. Cooksey and S. Mangalassary,</i>	
	<i>Clemson University, USA</i>	
21.1	Introduction.....	496
21.2	Types of meat packaging materials.....	496
21.3	Source reduction.....	498
21.4	Recyclable materials	501
21.5	Biobased materials.....	503
21.6	Future trends.....	515
21.7	References.....	515
22	Legislation and certification of environmentally compatible packaging in the European Union.....	521
	<i>C. Enguix, A. Imbernon and J. Ferrer, AINIA – Instituto Tecnológico Agroalimentario, Spain</i>	
22.1	Introduction.....	521
22.2	Packaging waste legislation.....	523
22.3	Biodegradable waste	539
22.4	Legislation on materials and articles intended to come into contact with food	542
22.5	Future trends for the legislation of materials and articles intended to come into contact with food	553
22.6	References.....	556
