Contents

Preface	vii
1. Introduction to Adhesives.....	1
1.1 Cyanoacrylates	1
1.1.1 Types of Cyanoacrylate	3
1.2 UV-curing Adhesives.....	9
1.2.1 The Curing Process	9
1.2.2 Health and Safety with UV	13
1.2.3 The Curing Equipment.....	13
1.2.4 Curing Adhesive Tack-free	14
1.2.5 Types of UV Adhesives.....	16
1.2.6 Benefits of UV Adhesives.....	17
1.3 Two-part Acrylics	17
1.4 Epoxies.....	19
1.4.1 Advantages and Disadvantages of Epoxies.....	21
1.5 Flexible Adhesive Sealants	21
1.5.1 Silicone Adhesive Sealants.....	22
1.5.2 Polyurethane Adhesive Sealants	23
1.5.3 Modified Silane Adhesive Sealants	24
1.6 Hot Melt Adhesives	25
1.6.1 Reactive Hot Melts	25
2. Engineering Thermoplastics.....	27
2.1 Introduction	27
2.2 Amorphous Thermoplastics.....	27
2.3 Semi-crystalline Polymers	29
2.4 Adhesive Performance on Thermoplastics.....	31

- 2.4.1 ABS..... 32
 - 2.4.2 LCP..... 32
 - 2.4.3 Polyamide 33
 - 2.4.4 PBT..... 34
 - 2.4.5 PC..... 36
 - 2.4.6 PEEK 37
 - 2.4.7 PES and PUS 38
 - 2.4.8 PE 39
 - 2.4.9 PET..... 40
 - 2.4.10 PMMA..... 40
 - 2.4.11 POM..... 41
 - 2.4.12 PPO 42
 - 2.4.13 PPS..... 43
 - 2.4.14 PP 43
 - 2.4.15 PS..... 45
 - 2.4.16 PTFE..... 46
 - 2.4.17 PVC 47
- 2.5 General Comments on Adhesive Bonding of Thermoplastics 47
- 3. Engineering Thermoset Plastics 51
 - 3.1 Introduction 51
 - 3.2 Adhesive Performance on Thermoset Plastics..... 53
 - 3.2.1 Diallyl Phthalate (DAP)..... 54
 - 3.2.2 Epoxies 55
 - 3.2.3 Phenolics..... 55
 - 3.2.4 Polyester (Thermoset) 56
 - 3.2.5 Polyurethanes..... 57
 - 3.2.6 Polyimides..... 58
 - 3.3 General Comments on Adhesive Bonding of Thermoset Plastics..... 59
- 4. Elastomers and Thermoplastic Elastomers (TPE)..... 61
 - 4.1 Introduction 61
 - 4.2 Adhesive Performance on Elastomers..... 61
 - 4.2.1 Butyl Rubber..... 62
 - 4.2.2 Copolyester TPE 63

4.2.3	Ethylene Acrylic (EEA) Rubber	64
4.2.4	Ethylene Propylene Diene Monomer Rubber (EPDM)	64
4.2.5	Ethylene-Vinyl Acetate Co-polymer (EVA)	65
4.2.6	Fluorosilicone Rubber	66
4.2.7	Natural Rubber	66
4.2.8	Nitrile Rubber	67
4.2.9	Neoprene Rubber	68
4.2.10	Polyisoprene	68
4.2.11	Polyolefin Elastomers	68
4.2.12	Silicone Rubber	70
4.2.13	Styrene-Butadiene Rubber (SBR)	70
4.2.14	Styrenic TPE	70
4.2.15	Thermoplastic Vulcanisates (TPV)	72
4.3	General Comments on Bonding of Elastomers	72
5.	Joint Design	75
5.1	Introduction	75
5.2	Lap Joint	75
5.2.1	Joint Width versus Joint Overlap	76
5.2.2	Optimising Joints to Minimise Stress	78
5.3	Double Lap Joint (Tongue and Groove)	80
5.4	Cylindrical Joints	81
5.4.1	Design Details	82
5.4.2	Cross Holes	84
5.4.3	Blind Holes	85
5.5	Butt Joint	86
5.6	Bond Line Thickness	88
5.7	Thermal Effects	89
5.8	Selecting the Viscosity of the Adhesive	89
5.9	Surface Preparation	91
6.	Bonding of Low-energy Plastics and Rubbers	93
6.1	Surface Wetting	93
6.2	Measuring Surface Energy	97
6.3	Surface Treatments	97

6.3.1	Abrasion	98
6.3.2	Corona Discharge	98
6.3.3	Plasma Treatment.....	98
6.3.4	Flame Treatment	98
6.3.5	Use of Primers	99
6.4	Two-part Acrylics	99
7.	Selecting the Adhesive	101
7.1	Introduction	101
7.2	Factors for Consideration	102
7.2.1	Selection of Materials.....	102
7.2.2	Adhesive Performance.....	103
7.2.3	Durability and Long Term Performance and Temperature Resistance.....	104
7.2.4	Surface Preparation.....	104
7.2.5	Ease of Application	105
7.2.6	Joint Design	105
7.2.7	Viscosity.....	106
7.2.8	Cure Speed.....	107
7.2.9	Gap-filling Capability.....	107
7.2.10	Sealing Capability	107
7.2.11	Health and Safety (H&S)	108
7.2.12	Approvals	111
7.2.13	Recycling Adhesives	111
7.3	A Summary for Adhesive Selection	112
8.	Dispensing Adhesives in Production	115
8.1	Basic Principles	115
8.1.1	Single- or Two-part Adhesive	115
8.1.2	Viscosity (see Section 5.8)	116
8.1.3	Cycle Time	118
8.1.4	Cure Method	118
8.1.5	Dispense Quantity.....	118
8.1.6	Open Time.....	120
8.1.7	Health and Safety.....	120

8.1.8	Cost	121
8.2	Dispensing Systems	121
8.2.1	Manual Units	122
8.2.2	Semi-automatic Dispensers.....	123
8.2.3	Syringe Dispensing	123
8.2.4	Pressure Pot Dispensing	123
8.3	Automatic Systems	125
9.	Durability and Environmental Testing.....	127
9.1	Introduction	127
9.1.1	Surface Finish and Surface Preparation	127
9.1.2	Joint Design	128
9.1.3	Substrate Bonded	129
9.2	Effect of Humidity and Water Absorption	130
9.3	Durability of Cyanoacrylates	130
9.3.1	Cyanoacrylates for Medical Applications.....	132
9.4	Durability of UV-curing Adhesives.....	132
9.4.1	UV Adhesives for Medical Applications	133
9.5	Durability of Two-Part Acrylics	135
9.6	Durability of Epoxies.....	135
9.7	Environmental Testing	135
10.	Troubleshooting	139
10.1	'No Glue' – Inspecting for the Presence of Adhesive	139
10.1.1	'No Glue' – Verifying the Adhesive Has Been Dispensed.....	140
10.1.2	'No Glue' – Air Bubbles and Voids.....	141
10.1.3	'No Glue' – Destructive and Non-destructive Methods	142
10.1.4	'No Glue' – Other Factors.....	142
10.2	'No Cure'	143
10.2.1	'No Cure' – Odour.....	143
10.2.2	'No Cure' – Factors Inhibiting Cure.....	143
10.2.3	'No Cure' – Disturbing Partially Cured Adhesive.....	144
10.2.4	'No Cure' – Differential Scanning Calorimetry (DSC).....	144
10.2.5	'No Cure' – Adhesive Curing Problems	145

Practical Guide to Adhesive Bonding of Small Engineering Plastic and Rubber Parts

10.2.6 Blooming of Cyanoacrylates 145

10.3 ‘No Stick’ 148

10.3.1 Theories of Adhesion 148

10.3.2 Cohesive 149

10.3.3 Adhesive Failure..... 150

10.3.4 Substrate Failure 151

10.4 No Performance 152

10.4.1 Surface Analysis 153

10.4.2 Defining the Failure Mode 153

Abbreviations..... 155

Author Index..... 157

Subject Index..... 159
