Authors.....	xxix

PART I Introduction and Background

Chapter 1	Classification of Biochemical Operations	3
1.1	The Role of Biochemical Operations	3
1.2	Criteria for Classification	5
1.2.1	The Biochemical Transformation.....	5
1.2.1.1	Removal of Soluble Organic Matter	5
1.2.1.2	Stabilization of Insoluble Organic Matter	6
1.2.1.3	Conversion of Soluble Inorganic Matter	6
1.2.2	The Biochemical Environment	7
1.2.3	Bioreactor Configuration.....	7
1.2.3.1	Suspended Growth Bioreactors	7
1.2.3.2	Attached Growth Bioreactors	8
1.3	Common "Named" Biochemical Operations	9
1.3.1	Suspended Growth Bioreactors	9
1.3.1.1	Activated Sludge	9
1.3.1.2	Biological Nutrient Removal	17
1.3.1.3	Aerobic Digestion	20
1.3.1.4	High-Rate Suspended Growth Anaerobic Processes.....	22
1.3.1.5	Anaerobic Digestion	23
1.3.1.6	Fermenters	24
1.3.1.7	Lagoons.....	24
1.3.2	Attached Growth Bioreactors.....	26
1.3.2.1	Fluidized Bed Biological Reactors	26
1.3.2.2	Rotating Biological Contactor (RBC).....	26
1.3.2.3	Trickling Filter (TF)	27
1.3.2.4	Packed Bed	28
1.3.2.5	Integrated Fixed Film Activated Sludge Systems.....	29
1.3.3	Miscellaneous Operations	30
1.4	Key Points.....	30
1.5	Study Questions.....	30
	References	30
Chapter 2	Fundamentals of Biochemical Operations	33
2.1	Overview of Biochemical Operations	33
2.2	Major Types of Microorganisms and Their Roles.....	34
2.2.1	Bacteria.....	35
2.2.2	Archaea	37
2.2.3	Eucarya.....	37

2.3	Microbial Ecosystems in Biochemical Operations	38
2.3.1	Aggregation and Biofloculation.....	38
2.3.2	Aerobic/Anoxic Operations.....	41
2.3.2.1	Suspended Growth Bioreactors	41
2.3.2.2	Attached Growth Bioreactors	45
2.3.3	Anaerobic Operations.....	46
2.3.3.1	General Nature of Methanogenic Anaerobic Operations.....	46
2.3.3.2	Microbial Groups in Methanogenic Communities and Their Interactions.....	48
2.3.3.3	Anaerobic Ammonia Oxidation	50
2.3.4	The Complexity of Microbial Communities: Reality versus Perception.....	50
2.4	Important Processes in Biochemical Operations	51
2.4.1	Biomass Growth, Substrate Utilization, and Yield	51
2.4.1.1	Overview of Energetics.....	51
2.4.1.2	Effects of Growth Environment on ATP Generation.....	52
2.4.1.3	Factors Influencing Energy for Synthesis.....	55
2.4.1.4	True Growth Yield.....	56
2.4.1.5	Constancy of Y in Biochemical Operations	57
2.4.2	Maintenance, Endogenous Metabolism, Decay, Lysis, and Death	58
2.4.3	Formation of Extracellular Polymeric Substances and Soluble Microbial Products.....	61
2.4.4	Solubilization of Particulate and High Molecular Weight Soluble Organic Matter	62
2.4.5	Ammonification	62
2.4.6	Phosphorus Uptake and Release	62
2.4.6.1	The Modified Mino PAO Model.....	63
2.4.6.2	Filipe–Zeng GAO Model.....	66
2.4.7	Overview	66
2.5	Key Points.....	67
2.6	Study Questions.....	68
	References	68

Chapter 3 Stoichiometry and Kinetics of Aerobic/Anoxic Biochemical Operations 75

3.1	Stoichiometry and Generalized Reaction Rate	75
3.1.1	Alternative Bases for Stoichiometry	75
3.1.2	Generalized Reaction Rate.....	78
3.1.3	Multiple Reactions: The Matrix Approach	79
3.2	Biomass Growth and Substrate Utilization	80
3.2.1	Generalized Equation for Biomass Growth	80
3.2.1.1	Half-Reaction Approach.....	80
3.2.1.2	Empirical Formulas for Use in Stoichiometric Equations	83
3.2.1.3	Determination of f_s	84

3.2.2	Aerobic Growth of Heterotrophs with Ammonia as the Nitrogen Source.....	85
3.2.3	Aerobic Growth of Heterotrophs with Nitrate as the Nitrogen Source.....	86
3.2.4	Growth of Heterotrophs with Nitrate as the Terminal Electron Acceptor and Ammonia as the Nitrogen Source.....	87
3.2.5	Aerobic Growth of Autotrophs with Ammonia as the Electron Donor.....	88
3.2.6	Kinetics of Biomass Growth.....	90
3.2.7	Effect of Substrate Concentration on μ	91
3.2.7.1	The Monod Equation.....	91
3.2.7.2	Simplifications of the Monod Equation.....	93
3.2.7.3	Inhibitory Substrates.....	93
3.2.7.4	Effects of Other Inhibitors.....	94
3.2.8	Specific Substrate Removal Rate.....	95
3.2.9	Multiple Limiting Nutrients.....	95
3.2.9.1	Interactive and Noninteractive Relationships.....	96
3.2.9.2	Implications of Multiple Nutrient Limitation.....	97
3.2.10	Representative Kinetic Parameter Values for Major Microbial Groups.....	99
3.2.10.1	Aerobic Growth of Heterotrophic Bacteria.....	99
3.2.10.2	Anoxic Growth of Heterotrophic Bacteria.....	100
3.2.10.3	Aerobic Growth of Autotrophic Bacteria.....	101
3.3	Maintenance, Endogenous Metabolism, Decay, Lysis, and Death.....	104
3.3.1	The Traditional Approach.....	104
3.3.2	The Lysis:Regrowth Approach.....	106
3.3.3	Endogenous Respiration with Storage.....	108
3.4	Soluble Microbial Product Formation.....	109
3.5	Solubilization of Particulate and High Molecular Weight Organic Matter.....	110
3.6	Ammonification and Ammonia Utilization.....	111
3.7	Phosphorus Uptake and Release.....	112
3.8	Simplified Stoichiometry and Its Use.....	116
3.8.1	Determination of the Quantity of Terminal Electron Acceptor Needed.....	116
3.8.2	Determination of Quantity of Nutrient Needed.....	117
3.9	Effects of Temperature.....	118
3.9.1	Methods of Expressing Temperature Effects.....	119
3.9.2	Effects of Temperature on Kinetic Parameters.....	120
3.9.2.1	Biomass Growth and Substrate Utilization.....	120
3.9.2.2	Maintenance, Endogenous Metabolism, Decay, Lysis, and Death.....	121
3.9.2.3	Solubilization of Particulate and High Molecular Weight Soluble Organic Matter.....	122
3.9.2.4	Phosphorus Uptake and Release.....	122
3.9.2.5	Other Important Microbial Processes.....	122
3.10	Key Points.....	122
3.11	Study Questions.....	125
	References.....	127

PART II Theory: Modeling of Ideal Suspended Growth Reactors

Chapter 4	Modeling Suspended Growth Systems	137
4.1	Modeling Microbial Systems	137
4.2	Mass Balance Equation	138
4.3	Reactor Types	138
4.3.1	Ideal Reactors	139
4.3.1.1	Continuous Stirred Tank Reactor	139
4.3.1.2	Plug-Flow Reactor	140
4.3.1.3	Batch Reactor	141
4.3.2	Nonideal Reactors	142
4.3.2.1	Residence Time Distribution	142
4.3.2.2	Experimental Determination of Residence Time Distribution	144
4.4	Modeling Nonideal Reactors	145
4.4.1	Continuous Stirred Tank Reactors in Series Model	145
4.4.2	Axial Dispersion Model	147
4.4.3	Representation of Complex Systems	148
4.5	Key Points	148
4.6	Study Questions	149
	References	150
Chapter 5	Aerobic Growth of Heterotrophs in a Single Continuous Stirred Tank Reactor Receiving Soluble Substrate	151
5.1	Basic Model for a Continuous Stirred Tank Reactor	151
5.1.1	Methods of Solids Separation and Wastage	152
5.1.2	Definitions of Residence Times	153
5.1.3	Format for Model Presentation	154
5.1.4	Alternative Methods of Expressing Biomass Concentrations and Yields	157
5.1.5	Concentrations of Soluble Substrate and Biomass	158
5.1.5.1	Mass Balance on Biomass	158
5.1.5.2	Mass Balance on Soluble Substrate	161
5.1.5.3	Mass Balance on Biomass Debris	163
5.1.5.4	Total Biomass Concentration	163
5.1.5.5	Active Fraction	163
5.1.5.6	Observed Yield	164
5.1.6	Excess Biomass Production Rate, Oxygen Requirement, and Nutrient Requirements	165
5.1.6.1	Excess Biomass Production Rate	165
5.1.6.2	Oxygen Requirement	166
5.1.6.3	Nutrient Requirement	166
5.1.7	Process Loading Factor or F/M Ratio	168
5.1.8	First-Order Approximation	169
5.1.9	Effect of Solids Retention Time on the Performance of a Continuous Stirred Tank Reactor as Predicted by Model	170
5.2	Extensions of the Basic Model	173
5.2.1	Soluble, Nonbiodegradable Organic Matter in Influent	174
5.2.2	Inert Suspended Solids in Influent	174

5.2.3	Biomass in Influent.....	177
5.2.4	Biodegradable Solids in Influent.....	184
5.2.5	Effects of Influent Solids on the Performance of a Continuous Stirred Tank Reactor as Predicted by Model	185
5.3	Effects of Kinetic Parameters.....	188
5.4	Biomass Wastage and Recycle.....	188
5.4.1	Garrett Configuration.....	188
5.4.2	Conventional Configuration	189
5.4.3	Membrane Bioreactors	190
5.5	Key Points.....	190
5.6	Study Questions.....	191
	References	193
Chapter 6	Multiple Microbial Activities in a Single Continuous Stirred Tank Reactor	195
6.1	International Water Association Activated Sludge Models.....	196
6.1.1	Components in Model No. 1	196
6.1.2	Reaction Rate Expressions in Model No. 1	199
6.1.3	Representative Parameter Values in Model No. 1	201
6.1.4	Model Nos. 2 and 2d	201
6.1.5	Model No. 3.....	203
6.1.6	Application of International Water Association Activated Sludge Models	203
6.2	Effect of Particulate Substrate.....	204
6.2.1	Steady-State Performance	205
6.2.2	Dynamic Performance	207
6.3	Nitrification and Its Impacts.....	210
6.3.1	Special Characteristics of Nitrifying Bacteria	210
6.3.2	Interactions between Heterotrophs and Autotrophs.....	213
6.3.3	Effects of Nitrification in Bioreactors Receiving Only Biomass	216
6.4	Denitrification and Its Impacts.....	216
6.4.1	Characteristics of Denitrification	216
6.4.2	Factors Affecting Denitrification	217
6.5	Multiple Events.....	221
6.5.1	Effects of Diurnal Variations in Loading.....	221
6.5.2	Intermittent Aeration.....	222
6.5.3	Closure	224
6.6	Key Points.....	225
6.7	Study Questions.....	226
	References	227
Chapter 7	Multiple Microbial Activities in Complex Systems	231
7.1	Modeling Complex Systems.....	231
7.1.1	Representing Complex Systems	231
7.1.2	Significance of Solids Retention Time.....	233
7.1.3	Importance of the Process Loading Factor	234
7.2	Conventional and High Purity Oxygen Activated Sludge	235
7.2.1	Description	235

7.2.2	Effect of SRT on Steady-State Performance	235
7.2.3	Dynamic Performance	237
7.2.4	Variations within the System	240
7.3	Step Feed Activated Sludge	242
7.3.1	Description	242
7.3.2	Effect of SRT on Steady-State Performance	243
7.3.3	Dynamic Performance	245
7.3.4	Variations within the System	246
7.4	Contact Stabilization Activated Sludge	249
7.4.1	Description	249
7.4.2	Effect of SRT on Steady-State Performance	249
7.4.3	Dynamic Performance	251
7.4.4	Effects of System Configuration	253
7.5	Modified Ludzack–Ettinger Process	256
7.5.1	Description	256
7.5.2	Effect of SRT on Steady-State Performance	257
7.5.3	Effects of System Configuration	259
7.6	Four-Stage Bardenpho Process	264
7.6.1	Description	264
7.6.2	Effect of SRT on Steady-State Performance	264
7.7	Biological Phosphorus Removal Process	266
7.7.1	Description	266
7.7.2	Effect of SRT on Steady-State Performance	268
7.7.3	Effects of System Configuration	271
7.7.4	Factors Affecting the Competition between Phosphate Accumulating and Glycogen Accumulating Organisms	274
7.8	Sequencing Batch Reactor	274
7.8.1	Description	274
7.8.2	Analogy to Continuous Systems	277
7.8.3	Effects of Cycle Characteristics	279
7.9	Key Points	282
7.10	Study Questions	284
	References	286

Chapter 8	Stoichiometry, Kinetics, and Simulations of Anaerobic Biochemical Operations	289
8.1	Stoichiometry of Anaerobic Biochemical Operations	289
8.1.1	Solubilization of Particulate and High Molecular Weight Organic Matter	290
8.1.2	Fermentation and Anaerobic Oxidation Reactions	291
8.1.3	Methanogenesis	293
8.1.4	Physical and Chemical Processes in Anaerobic Systems	293
	8.1.4.1 Acid–Base Dissociations	293
	8.1.4.2 Gas Transfer	294
	8.1.4.3 Precipitation	294
8.2	Kinetics of Anaerobic Biochemical Operations	295
8.2.1	Disintegration and Hydrolysis	295
8.2.2	Fermentation and Anaerobic Oxidation Reactions	296
8.2.3	Methanogenesis	299
8.2.4	Maintenance, Endogenous Metabolism, Decay, Lysis, and Death	299

8.2.5	Inhibition Factors in Anaerobic Biochemical Operations.....	299
8.2.6	Effects of Temperature on Kinetic Parameters.....	300
8.3	Anaerobic Digestion Model No. 1.....	300
8.3.1	Components of Anaerobic Digestion Model No. 1.....	300
8.3.2	Simulating the Anaerobic Digestion of Primary and Waste Activated Sludge.....	300
8.4	Key Points.....	306
8.5	Study Questions.....	306
	References.....	307
Chapter 9	Techniques for Evaluating Kinetic and Stoichiometric Parameters.....	311
9.1	Treatability Studies.....	311
9.2	Simple Soluble Substrate Model with Traditional Decay as Presented in Chapter 5.....	313
9.2.1	Data to Be Collected.....	313
9.2.2	Determination of $Y_{H,T}$ and b_H	314
9.2.3	Determination of f_D	316
9.2.4	Estimation of Inert Soluble COD, S_I	317
9.2.5	Estimation of Monod Parameters, $\hat{\mu}_H$ and K_S	317
9.2.5.1	Hanes Linearization.....	318
9.2.5.2	Hofstee Linearization.....	318
9.2.5.3	Lineweaver–Burk Linearization.....	319
9.2.6	Estimation of $k_{e,T}$	320
9.3	Simple Soluble Substrate Model with Traditional Decay in the Absence of Data on the Active Fraction.....	323
9.3.1	Data to Be Collected.....	323
9.3.2	Determination of b_H	324
9.3.3	Determination of $Y_{H,T}$	325
9.3.4	Determination of S_I , $\hat{\mu}_H$, K_S , and $k_{e,T}$	325
9.4	Use of Batch Reactors to Determine Monod Kinetic Parameters for Single Substrates.....	327
9.4.1	Intrinsic versus Extant Kinetics.....	327
9.4.2	Intrinsic Kinetics.....	328
9.4.3	Extant Kinetics.....	329
9.5	Complex Substrate Model with Lysis:Regrowth Approach to Decay as Presented in Chapter 6 (International Water Association Activated Sludge Model No. 1).....	330
9.5.1	Data to Be Collected.....	330
9.5.2	Characterization of Wastewater and Estimation of Stoichiometric Coefficients.....	330
9.5.2.1	Determination of Y_H	332
9.5.2.2	Determination of Influent Readily Biodegradable COD (S_{SO}).....	332
9.5.2.3	Determination of Influent Inert Particulate COD (X_{IO}).....	334
9.5.2.4	Characterization of Nitrogen-Containing Material.....	334
9.5.3	Estimation of Kinetic Parameters.....	335
9.5.3.1	Aerobic Growth of Heterotrophs.....	335
9.5.3.2	Decay of Autotrophs.....	335
9.5.3.3	Aerobic Growth of Autotrophs.....	336
9.5.3.4	Decay of Heterotrophs.....	337

9.5.3.5	Correction Factors for Anoxic Conditions, η_g and η_h	337
9.5.3.6	Hydrolysis and Ammonification.....	338
9.5.4	Order of Determination.....	339
9.6	Using Traditional Measurements to Approximate Wastewater Characteristics for Modeling.....	339
9.7	Key Points.....	343
9.8	Study Questions.....	345
	References	347

PART III Applications: Suspended Growth Reactors

Chapter 10	Design and Evaluation of Suspended Growth Processes	353
10.1	Guiding Principles.....	353
10.2	Iterative Nature of Process Design and Evaluation.....	355
10.3	Basic Decisions during Design and Evaluation.....	357
10.3.1	Biochemical Environment.....	357
10.3.2	Solids Retention Time	359
10.3.2.1	Aerobic/Anoxic Systems.....	360
10.3.2.2	Anaerobic Systems	362
10.3.3	Items from Process Stoichiometry	363
10.3.4	Interactions among Decisions	364
10.4	Levels of Design and Evaluation	366
10.4.1	Preliminary Design and Evaluation Based on Guiding Principles.....	366
10.4.2	Stoichiometric-Based Design and Evaluation	372
10.4.3	Simulation-Based Design and Evaluation	374
10.4.4	Effluent Goals versus Discharge Requirements	375
10.4.5	Optimization.....	375
10.5	Key Points.....	376
10.6	Study Questions.....	378
	References	379
Chapter 11	Activated Sludge.....	381
11.1	Process Description	381
11.1.1	General Description and Facilities	381
11.1.2	Process Options and Comparison	382
11.1.3	Typical Applications.....	385
11.2	Factors Affecting Performance	387
11.2.1	Floc Formation and Filamentous Growth	387
11.2.2	Solids Retention Time	392
11.2.3	Mixed Liquor Suspended Solids Concentration.....	395
11.2.4	Dissolved Oxygen.....	395
11.2.5	Oxygen Transfer and Mixing	396
11.2.6	Nutrients	398
11.2.7	Temperature.....	399
11.3	Process Design	400
11.3.1	Overview	400

11.3.2	Factors to be Considered during Design	401
11.3.2.1	Selection of the Appropriate Process Option	401
11.3.2.2	Selection of the Solids Retention Time	402
11.3.2.3	Consideration of the Effects of Temperature.....	405
11.3.2.4	Consideration of the Effects of Transient Loadings	406
11.3.2.5	Distribution of Volume, Mixed Liquor Suspended Solids, and Oxygen in Nonuniform Systems.....	409
11.3.3	Design of a Completely Mixed Activated Sludge System—The General Case	409
11.3.3.1	Basic Process Design for the Steady-State Case	410
11.3.3.2	Consideration of the Effects of Transient Loadings	417
11.3.4	Conventional, High Purity Oxygen, and Selector Activated Sludge—Systems with Uniform Mixed Liquor Suspended Solids Concentrations but Variations in Oxygen Requirements	421
11.3.4.1	Approximate Technique for Spatially Distributing Oxygen Requirements.....	422
11.3.4.2	Design of Conventional Activated Sludge Systems	429
11.3.4.3	Design of High Purity Oxygen Activated Sludge Systems	432
11.3.4.4	Design of Selector Activated Sludge Systems	432
11.3.5	Step Feed and Contact Stabilization Activated Sludge—Systems with Nonuniform Mixed Liquor Suspended Solids Concentrations.....	436
11.3.5.1	Design of Step Feed Activated Sludge Systems	437
11.3.5.2	Design of Contact Stabilization Activated Sludge Systems	440
11.3.6	Batch Reactors—Sequencing Batch Reactor Activated Sludge.....	448
11.3.7	Process Optimization Using Dynamic Models	452
11.4	Process Operation.....	453
11.4.1	Solids Retention Time Control.....	453
11.4.1.1	Determination of Solids Wastage Rate.....	453
11.4.1.2	Solids Retention Time Control Based on Direct Analysis of Mixed Liquor Suspended Solids Concentration.....	455
11.4.1.3	Solids Retention Time Control Based on Centrifuge Analysis of Mixed Liquor Suspended Solids Concentration.....	455
11.4.1.4	Hydraulic Control of Solids Retention Time	455
11.4.2	Qualitative Observations	456
11.4.2.1	Bioreactor.....	457
11.4.2.2	Clarifier.....	457
11.4.2.3	During Sludge Volume Index Measurement	458
11.4.2.4	Microscopic Examination.....	459
11.4.3	Activated Sludge Oxidation to Control Settleability.....	459
11.4.4	Dynamic Process Control	460
11.5	Key Points.....	461
11.6	Study Questions.....	464
	References	466

Chapter 12	Biological Nutrient Removal	471
12.1	Process Description	471
12.1.1	General Description	471
12.1.2	Process Options and Comparison	471
12.1.3	Typical Applications	479
12.2	Factors Affecting Performance	480
12.2.1	Solids Retention Time	480
12.2.2	Ratios of Wastewater Organic Matter to Nutrient	482
12.2.3	Composition of Organic Matter in Wastewater	486
12.2.4	Effluent Total Suspended Solids	486
12.2.5	Environmental and Other Factors	487
12.3	Process Design	489
12.3.1	Biological Nitrogen Removal Processes	489
12.3.1.1	Nitrification	490
12.3.1.2	Design of an Anoxic Selector	493
12.3.1.3	Design of an MLE System to Achieve a Desired Effluent Nitrate-N Concentration	498
12.3.1.4	Four-Stage Bardenpho Process—Addition of Second Anoxic and Aerobic Zones	503
12.3.1.5	Simultaneous Nitrification and Denitrification	506
12.3.1.6	Separate Stage Denitrification	509
12.3.2	Biological Phosphorus Removal Processes	510
12.3.3	Processes That Remove Both Nitrogen and Phosphorus	514
12.3.4	Process Optimization by Dynamic Simulation	517
12.4	Process Operation	518
12.5	Key Points	519
12.6	Study Questions	522
	References	524
Chapter 13	Aerobic Digestion	529
13.1	Process Description	529
13.1.1	General Description	529
13.1.2	Process Options and Comparison	534
13.1.2.1	Conventional Aerobic Digestion	535
13.1.2.2	Anoxic/Aerobic Digestion	536
13.1.2.3	Autothermal Thermophilic Aerobic Digestion	538
13.1.3	Typical Applications	541
13.2	Factors Affecting Performance	542
13.2.1	Solids Retention Time and Temperature	542
13.2.2	pH	545
13.2.3	Mixing	546
13.2.4	Solids Type	546
13.2.5	Bioreactor Configuration	547
13.3	Process Design	549
13.3.1	Overview	549
13.3.2	Design from Empirical Correlations	549
13.3.3	Design from Batch Data	552
13.3.4	Design by Simulation	554
13.4	Process Operation	554

13.5	Key Points.....	555
13.6	Study Questions.....	556
	References	558
Chapter 14	Anaerobic Processes.....	561
14.1	Process Description.....	561
14.1.1	General Description	561
14.1.2	Anaerobic Digestion.....	562
14.1.3	High-Rate Anaerobic Processes.....	565
14.1.3.1	Upflow Anaerobic Sludge Blanket.....	566
14.1.3.2	Anaerobic Filter.....	568
14.1.3.3	Hybrid Upflow Anaerobic Sludge Blanket/ Anaerobic Filter.....	568
14.1.3.4	Expanded Granular Sludge Bed	568
14.1.4	Solids Fermentation Processes.....	569
14.1.5	Comparison of Process Options.....	571
14.1.6	Typical Applications.....	574
14.2	Factors Affecting Performance	576
14.2.1	Solids Retention Time	577
14.2.2	Volumetric Organic Loading Rate	577
14.2.3	Total Hydraulic Loading	579
14.2.4	Temperature.....	580
14.2.5	pH	582
14.2.6	Inhibitory and Toxic Materials.....	586
14.2.6.1	Light Metal Cations	586
14.2.6.2	Ammonia	586
14.2.6.3	Sulfide	589
14.2.6.4	Heavy Metals.....	590
14.2.6.5	Volatile Acids.....	590
14.2.6.6	Other Organic Compounds.....	591
14.2.7	Nutrients	591
14.2.8	Mixing.....	592
14.2.9	Waste Type	593
14.3	Process Design	594
14.3.1	Anaerobic Digestion.....	595
14.3.2	High Rate Anaerobic Processes	601
14.3.3	Fermentation Systems	602
14.3.4	Other Design Considerations	604
14.4	Process Operation.....	605
14.4.1	Process Monitoring and Control	605
14.4.2	Common Operating Problems.....	606
14.5	Key Points.....	607
14.6	Study Questions.....	610

Chapter 15	Lagoons	617
15.1	Process Description	617
15.1.1	General Description	617

15.1.2	Process Options and Comparison	618
15.1.2.1	Anaerobic Lagoon	618
15.1.2.2	Facultative and Facultative/Aerated Lagoon.....	619
15.1.2.3	Aerobic Lagoon	621
15.1.2.4	Comparison of Lagoon Systems	622
15.1.3	Typical Applications.....	623
15.2	Factors Affecting Performance	625
15.2.1	Solids Retention Time/Hydraulic Residence Time	625
15.2.2	Volumetric Organic Loading Rate	627
15.2.3	Areal Organic Loading Rate	627
15.2.4	Mixing.....	628
15.2.5	Temperature.....	630
15.2.6	Other Factors	630
15.3	Process Design	631
15.3.1	Completely Mixed Aerated Lagoons	631
15.3.2	Completely Mixed Aerated Lagoon with Aerobic Solids Stabilization.....	639
15.3.3	Completely Mixed Aerated Lagoon with Benthic Stabilization and Storage.....	641
15.4	Process Operation.....	647
15.5	Key Points.....	648
15.6	Study Questions.....	649

PART IV Theory: Modeling of Ideal Attached Growth Reactors

Chapter 16	Biofilm Modeling	655
16.1	Nature of Biofilms	655
16.2	Effects of Transport Limitations	660
16.2.1	Mass Transfer to and within a Biofilm.....	660
16.2.2	Modeling Transport and Reaction: Effectiveness Factor Approach	663
16.2.2.1	Effectiveness Factor.....	663
16.2.2.2	Application of Effectiveness Factor.....	666
16.2.3	Modeling Transport and Reaction: Pseudoanalytical Approach.....	669
16.2.3.1	Pseudoanalytical Approach	669
16.2.3.2	Application of Pseudoanalytical Approach	672
16.2.3.3	Normalized Loading Curves	676
16.2.3.4	Parameter Estimation	680
16.2.4	Modeling Transport and Reaction: Limiting-Case Solutions	680
16.2.4.1	Deep Biofilm.....	681
16.2.4.2	Fully Penetrated Biofilm.....	681
16.2.4.3	First-Order Biofilm	681
16.2.4.4	Zero-Order Biofilm.....	682
16.2.4.5	Other Cases.....	682
16.2.4.6	Error Analysis.....	682

16.3	Effects of Multiple Limiting Nutrients.....	682
16.4	Multispecies Biofilms	685
16.5	Multidimensional Mathematical Models of Biofilms.....	689
16.6	Key Points.....	691
16.7	Study Questions.....	693
	References	694
Chapter 17	Biofilm Reactors.....	697
17.1	Packed Towers	697
17.1.1	Description and Simplifying Assumptions for Model Development.....	697
17.1.2	Model Development	698
17.1.3	Dependence of Substrate Flux on Bulk Substrate Concentration	702
17.1.4	Performance of a Packed Tower without Flow Recirculation ($\alpha = 0$).....	707
17.1.4.1	Performance as a Function of Tower Depth	707
17.1.4.2	Effect of Biofilm Surface Area on Tower Performance.....	707
17.1.4.3	Effect of Influent Substrate Concentration on Tower Performance.....	709
17.1.4.4	Effect of Influent Flow Rate on Tower Performance.....	711
17.1.5	Performance of a Packed Tower with Flow Recirculation.....	712
17.1.6	Factors Not Considered in Model.....	714
17.1.6.1	External Mass Transfer.....	714
17.1.6.2	Biomass Detachment	715
17.1.6.3	Other Factors Not Considered	715
17.1.7	Other Packed Tower Models	717
17.1.7.1	Grady and Lim Model	717
17.1.7.2	Velz Model.....	718
17.1.7.3	Eckenfelder Model.....	718
17.1.7.4	Kornegay Model	719
17.1.7.5	Schroeder Model.....	720
17.1.7.6	Logan, Hermanowicz, and Parker Model.....	720
17.1.7.7	Hinton and Stensel Model	720
17.2	Rotating Disc Reactors	721
17.2.1	Description and Model Development.....	721
17.2.1.1	Description.....	721
17.2.1.2	External Mass Transfer.....	722
17.2.1.3	Model for the Submerged Sector	724
17.2.1.4	Model for the Aerated Sector	725
17.2.2	Performance of Rotating Disc Reactor Systems	726
17.2.3	Other Rotating Disc Reactor Models	732
17.2.3.1	Grady and Lim Model	732
17.2.3.2	Kornegay Model	733
17.2.3.3	Model of Hansford, Andrews, Grieves, and Carr.....	733
17.2.3.4	Model of Famularo, Mueller, and Mulligan	734
17.2.3.5	Model of Watanabe.....	734
17.2.3.6	Model of Gujer and Boller	734
17.2.3.7	Model of Spengel and Dzombak.....	734

17.3	Key Points.....	735
17.4	Study Questions.....	736
	References	737
Chapter 18	Fluidized Bed Biological Reactors.....	739
18.1	Description of Fluidized Bed Biological Reactor	739
18.1.1	General Characteristics	739
18.1.2	Nature of the Biofilm.....	741
18.2	Fluidization.....	742
18.2.1	Fluidization of Clean Media.....	742
18.2.2	Effects of Biomass on Fluidization	745
18.2.2.1	Terminal Settling Velocity.....	745
18.2.2.2	Bed Porosity and Expansion	747
18.2.2.3	Solids Mixing	749
18.2.3	Relationship between Fluidization and Biomass Quantity	751
18.3	Modeling Fluidized Bed Biological Reactors	753
18.3.1	Biofilm Submodel.....	754
18.3.2	Fluidization Submodel	756
18.3.3	Reactor Flow Submodel	756
18.4	Theoretical Performance of Fluidized Bed Biological Reactors.....	757
18.5	Sizing a Fluidized Bed Biological Reactor.....	759
18.6	Key Points.....	761
18.7	Study Questions.....	762
	References	763

PART V Applications: Attached Growth Reactors

Chapter 19	Trickling Filter	767
19.1	Process Description	767
19.1.1	General Description	767
19.1.2	Process Options.....	770
19.1.2.1	Treatment Objectives	770
19.1.2.2	Media Type	771
19.1.2.3	Coupled Trickling Filter/Activated Sludge Systems.....	774
19.1.3	Comparison of Process Options.....	775
19.1.4	Typical Applications.....	778
19.2	Factors Affecting Performance	779
19.2.1	Process Loading	779
19.2.2	Recirculation	783
19.2.3	Media Depth.....	784
19.2.4	Temperature.....	785
19.2.5	Ventilation	786
19.2.6	Media Type.....	788
19.2.7	Distributor Configuration.....	789
19.2.8	Wastewater Characteristics	791
19.2.9	Effluent Total Suspended Solids.....	791

19.3	Process Design	792
19.3.1	Sizing Trickling Filters with Black-Box Correlations	793
19.3.2	Sizing Trickling Filters with Loading Factor Relationships	794
19.3.3	Sizing Trickling Filters with the Modified Velz/Germain Equation	799
19.3.4	The Model of Logan, Hermanowicz and Parker	803
19.3.5	Ventilation System	804
19.3.6	Coupled Trickling Filter/Activated Sludge Processes	804
19.4	Process Operation	811
19.4.1	Typical Operation	811
19.4.2	Coupled Processes	812
19.4.3	Nuisance Organisms	813
19.5	Key Points	813
19.6	Study Questions	815
	References	816
Chapter 20	Rotating Biological Contactor	819
20.1	Process Description	819
20.1.1	General Description	819
20.1.2	Process Options	821
20.1.2.1	Treatment Objectives	821
20.1.2.2	Equipment Type	823
20.1.3	Comparison of Process Options	823
20.1.4	Typical Applications	824
20.2	Factors Affecting Performance	825
20.2.1	Organic Loading	825
20.2.2	Hydraulic Loading	828
20.2.3	Staging	829
20.2.4	Temperature	829
20.2.5	Wastewater Characteristics	830
20.2.6	Biofilm Characteristics	831
20.3	Process Design	832
20.3.1	Removal of Biodegradable Organic Matter	832
20.3.1.1	General Approach	832
20.3.1.2	First-Order Model	833
20.3.1.3	Second-Order Model	835
20.3.2	Separate Stage Nitrification	838
20.3.3	Combined Carbon Oxidation and Nitrification	840
20.3.4	Pilot Plants	843
20.3.5	General Comments	847
20.4	Process Operation	848
20.5	Key Points	848
20.6	Study Questions	850
	References	851
Chapter 21	Submerged Attached Growth Bioreactors	853
21.1	Process Description	853
21.1.1	General Description	853
21.1.2	Downflow Packed Bed Bioreactors	855

21.1.3	Upflow Packed Bed Bioreactors.....	857
21.1.4	Fluidized and Expanded Bed Biological Reactors.....	859
21.1.5	Moving Bed Biological Reactors	859
21.1.6	Integrated Fixed Film Activated Sludge	860
21.1.7	Other Process Options.....	862
21.1.8	Comparison of Process Options.....	863
21.1.9	Typical Applications.....	864
21.2	Factors Affecting Performance	865
21.2.1	Total Volumetric Loading	865
21.2.2	Substrate Flux and Surface Loading.....	868
21.2.3	Total Hydraulic Loading	869
21.2.4	Solids Retention Time	869
21.2.5	Hydraulic Residence Time	872
21.2.6	Dissolved Oxygen Concentration	872
21.2.7	Other Factors	873
21.3	Process Design	873
21.3.1	General Design Procedures.....	873
21.3.2	Packed Bed Bioreactors.....	875
21.3.3	Fluidized and Expanded Bed Biological Reactors.....	879
21.3.4	Moving Bed Biological Reactors	881
21.3.5	Integrated Fixed Film Activated Sludge Systems	881
21.3.6	General Design Experience.....	885
21.4	Process Operation.....	885
21.5	Key Points.....	886
21.6	Study Questions.....	887
	References	888

PART VI Future Challenges

Chapter 22	Fate and Effects of Xenobiotic Organic Chemicals	895
22.1	Biodegradation.....	895
22.1.1	Requirements for Biodegradation	896
22.1.2	Factors Influencing Biodegradation	897
22.1.3	Classes of Biodegradation and Their Models	897
22.1.3.1	Growth-Linked Biodegradation.....	897
22.1.3.2	Cometabolic Biodegradation	898
22.2	Abiotic Removal Mechanisms.....	899
22.2.1	Volatilization	900
22.2.1.1	Models for Volatilization.....	900
22.2.1.2	Estimation of Coefficients	901
22.2.2	Sorption	902
22.2.2.1	Mechanisms and Models	902
22.2.2.2	Estimation of Coefficients	903
22.3	Relative Importance of Biotic and Abiotic Removal.....	904
22.4	Effects of Xenobiotic Organic Chemicals.....	907
22.4.1	Mechanisms and Models for Inhibition and Toxicity	908
22.4.2	Effects of Xenobiotic Organic Chemicals on Carbon Oxidation and Nitrification	909

22.5	Experience with Xenobiotic Organic Chemicals	910
22.6	Key Points.....	911
22.7	Study Questions.....	913
	References	913

Chapter 23 Designing Systems for Sustainability 917

23.1	Defining Sustainability.....	917
23.1.1	The Context for Improved Sustainability.....	917
23.1.1.1	Demographic Trends.....	917
23.1.1.2	Resource Consumption.....	918
23.1.1.3	Sustainable Development.....	918
23.1.2	The Triple Bottom Line: Social, Economic, Environmental	918
23.1.3	Technical Objectives for More Sustainable Systems	920
23.1.3.1	Greater Water Resource Availability.....	920
23.1.3.2	Lowering Energy and Chemical Consumption	921
23.1.3.3	Recovering Resources	921
23.2	Technologies to Achieve Greater Water Resource Availability	921
23.2.1	Membrane Bioreactors	921
23.2.1.1	Technology Description.....	921
23.2.1.2	Contribution to Sustainability.....	922
23.2.2	Biological Nutrient Removal	923
23.2.2.1	Technology Description.....	923
23.2.2.2	Contribution to Sustainability.....	923
23.2.3	Advanced Treatment Coupled with Biodegradation	923
23.2.3.1	Technology Description.....	924
23.2.3.2	Contribution to Sustainability.....	924
23.3	Technologies to Achieve Lower Energy and Chemical Consumption.....	924
23.3.1	Anaerobic Treatment.....	924
23.3.1.1	Technology Description.....	925
23.3.1.2	Contribution to Sustainability.....	926
23.3.2	Biological Nutrient Removal	927
23.3.2.1	Technology Description.....	927
23.3.2.2	Contribution to Sustainability.....	927
23.3.3	Nitrification and Denitrification.....	927
23.3.3.1	Technology Description.....	927
23.3.3.2	Contribution to Sustainability.....	930
23.3.4	Biological Air Treatment.....	930
23.3.4.1	Technology Description.....	930
23.3.4.2	Contribution to Sustainability.....	931
23.4	Technologies to Achieve Resource Recovery.....	931
23.4.1	Biological Nutrient Removal and Recovery	932
23.4.1.1	Technology Description.....	932
23.4.1.2	Contribution to Sustainability.....	933
23.4.2	Land Application of Biosolids.....	933
23.4.2.1	Technology Description.....	934
23.4.2.2	Contribution to Sustainability.....	934
23.5	Closing Comments	934

23.6 Key Points..... 935

23.7 Study Questions..... 936

References 937

Appendix A: Acronyms 939

Appendix B: Symbols 943

Appendix C: Unit Conversions 961

Index..... 963
