

Fourth Edition

WHEAT

CHEMISTRY AND TECHNOLOGY

Khalil Khan and Peter R. Shewry, Editors

Contents

CHAPTER

1. Wheat: A Unique Grain for the World. C. W. Wrigley || 1

Wheat and People ♦ 1

Wheat and Human Origins | Wheat and Human Food

Wheat Taxonomy ♦ 4

Wheat and Its Cereal Relatives | Wheat as a Grain Genus | Wheat and Its Ancestral Relatives

Wheat in a Hungry World ♦ 6

Wheat Around the World | Wheat Harvesting Around the Globe | Wheat in World Trade | Wheat—How We Measure It

Wheat in the Grain Chain ♦ 8

Wheat Breeding—Then and Now | Wheat Production | Wheat Harvesting and Segregation | Wheat Storage and Transport
| Wheat Marketing | Wheat Processing

Wheat and Human Health ♦ 14

Advantages and Limitations of Wheat in the Diet | Allergy and Intolerance to Wheat

Conclusion ♦ 15

2. The Wheat Crop. Michael J. Gooding || 19

Origins ♦ 21

Progenitors | Early Use, Then Domestication | Free-Threshing and Hexaploid Wheats | Wheats of Today

Growth and Development ♦ 25

Seed Structure and Germination | Vegetative Growth | Reproductive Growth

Wheat Improvement ♦ 32

The Decline of Stature | The Increase of Biomass | Resistance to Disease | Tolerance of Abiotic Stresses | Modern Breeding Methods

Agronomy of Wheat ♦ 38

Sowing | Nutrition | Disease Control

3. Development, Structure, and Mechanical Properties of the Wheat Grain. D. B. Bechtel, J. Abecassis, P. R. Shewry, and A. D. Evers || 51

Terminology and Whole-Grain Considerations ♦ 51

Terminology | Structure of the Inflorescence | External Appearance of the Wheat Grain | Whole-Grain Development

Microstructure of the Mature and Developing Wheat Grain ♦ 56

Caryopsis Coats | Endosperm | Embryo

Molecular and Biochemical Studies of Grain Development ♦ 77

Gene Expression Analysis | Proteomic Studies

Structure and Grain Mechanical Properties ♦ 80

Properties of the Outer Layers | Endosperm Mechanical Properties | Integration of Data

4. Criteria of Wheat and Flour Quality. Gordon R. Carson and Nancy M. Edwards || 97

Wheat Classification ♦ 97

Technological Classification of Wheat | End-Use Classification of Wheat

Grading Factors That Affect Milling Yield and End-Use Quality ♦ 99

Grading Factors That Affect Milling Yield | Grading Factors That Affect End-Use Quality | Grading Factors That Affect Food Safety

Chemical Characteristics ♦ 104

Moisture Content | Ash | Flour Color | Fiber Content | Protein Content | Enzymatic Activity

Intrinsic Characteristics ♦ 106

Protein Quality | Starch Quality

Processing Quality ♦ 107

Milling Quality | Bread-Baking Quality | Noodle and Asian Product Quality

Wheat Classes—Producing Nations ♦ 109

Major Exporters | Other Producing and Exporting Countries

5. Wheat Flour Milling. Elieser S. Posner || 119

Wheat Receiving at the Mill ♦ 120

Evaluation and Testing

Wheat Storage ♦ 124

Precleaning of Wheat Before Storage | Storage Bins | Preserving Wheat in Storage | Other Means to Preserve Wheat
| Issue of Wheat and Flour Blending in the Mill

The Mill's Wheat-Cleaning System ♦ 126

Handling of Wheat from Storage Bins | Wheat-Cleaning Machines and Work Principles | Wheat Screenings

Wheat Conditioning for Milling ♦ 129

Milling Machinery ♦ 130

Grinding and Reduction Equipment | Sieving and Separation Equipment | Purification of Endosperm
| Air as a Tool and a Transport Medium in the Milling Process

The Milling Process ♦ 136

The Mill Flow Sheet (Diagram) | Break System | Grading System | Purification System | Sizing System | Reduction System
| Milling of Hard Wheat | Durum Wheat Milling | Soft Wheat Milling

End-Product Quality and Handling ♦ 140

Flour and Semolina Color | Bran Content in Mill End Products | Flour Particle Size | Ash as a Flour Evaluation Parameter
| Starch Damage

Mill Technical Performance Analysis ♦ 141

Flour Streams in the Mill and Their Blending | Flour Extraction | Fluctuation in Mill Performance | Flour Mill Sanitation
| Air Classification of Flour: Methods and Objectives | Heat Treatment of Flour | Whole-Wheat Products | Mill By-Products
| Flour Storage, Blending, Additives, and Flour Enrichment | Loading, Packing, and Shipping

Recent Developments in Commercial Milling ♦ 147

Wheat Debranning Before Milling | Light-Out Mills | Controlling Ambient Conditions in the Mill Space
| ISO, HACCP, and GMP and Their Effect on the Industry

Future Developments in Wheat Milling ♦ 148

6. Structure and Functional Properties of Gluten. Rob J. Hamer, Finlay MacRitchie, and Peter L. Weegels || 153

Scope ♦ 153

Structure-Function Models of Gluten ♦ 153

Models Based on the Structure of Glutenin | Models Based on Polymer Science | Models Based on Rheology | Summary of Models

Mixing Flour into Dough ♦ 155

Mixing-Induced Changes | How Glutenin Proteins Affect Mixing | The Glutenin Protein Network as a Guide to Understanding Mixing
| Chemical Reactions During Mixing | Nondisulfide Cross-Links in Dough | Synthesis

Wheat Proteins During Proofing ♦ 161

Protein Functionality in a Proofing Dough | Bulk Rheological Properties of Wheat Proteins
| Surface Rheological Behavior of Wheat Proteins

Wheat Proteins During Baking ♦ 166

Transformation of Dough to Bread | Chemical Changes | Changes in Extractability | Conformations of Gluten Proteins During Heating
| Physicochemical Changes of Gluten Proteins During Heating | Conclusions: Mechanisms of Denaturation of Gluten Proteins

7. Micronutrients and Phytochemicals in Wheat Grain. Vieno Piironen, Anna-Maija Lampi, Päivi Ekholm, Marjatta Salmenkallio-Marttila, and Kirsi-Helena Liukkonen || 179

B Vitamins ♦ 179

Significance of Wheat in B Vitamin Nutrition | Bioavailability of B Vitamins from Wheat Products | B Vitamin Levels in Wheat Grains
| B Vitamin Contents in Grain Fractions | Effect of Other Processing Methods on B Vitamin Contents

Tocopherols and Tocotrienols ♦ 185

General Aspects | Significance of Wheat as a Source of Tocopherols and Tocotrienols | Tocopherols and Tocotrienols in Wheat Grains
| Tocopherols and Tocotrienols in Milling Fractions of Wheat | Effects of Other Processing Methods and Storage on Tocopherols
and Tocotrienols

Carotenoids ♦ 189

General Aspects of Carotenoids in Wheat | Significance of Wheat as a Source of Carotenoids | Carotenoids in Wheat Grains
| Carotenoids in Wheat Milling Fractions | Effects of Other Processing Methods and Storage on Carotenoids

Minerals and Trace Elements ♦ 193

Wheat as a Source of Minerals and Trace Elements | Mineral and Trace Element Contents of Wheat
| Bioavailability of Mineral and Trace Elements from Wheat

Phytosterols ♦ 196

Phytosterols as Functional Food Components | Phytosterols in Wheat Grain | Phytosterols in Milling Fractions
| Free Phytosterols and Steryl Conjugates

Phenolic Compounds ♦ 201

Phenolic Compounds in Wheat | Phenolic Acids | Alkylresorcinols | Lignans | Other Phenolic Compounds

Choline and Betaine ♦ 209

General Aspects | Significance of Wheat and Wheat Products as a Source of Choline and Betaine

Future Research Needs ♦ 210

8. Wheat Grain Proteins. Peter R. Shewry, Renato D'Ovidio, Domenico Lafiandra, John A. Jenkins, E. N. Clare Mills, and Ferenc Békés || 223

Overview ♦ 223

Wheat Seed Proteins: A Historical Perspective | Impact of “-omics” Technologies | Classification of Wheat Grain Proteins
| Seed Protein Superfamilies | Proteomic Analyses

Protein and Amino Acid Compositions of Whole-Grain Fractions ♦ 227

Grain Protein Content | Amino Acid Composition of Wheat Grain | Nutritional Quality | Analysis of Grain Fractions
| Extraction and Analysis of Protein Fractions

Gluten Proteins ♦ 236

Polymorphism and Genetics | Sequences and Relationships of Gluten Proteins | Structures
| Gluten Proteins and Grain Processing Properties

Low Molecular Weight Proteins Related to Prolamins ♦ 265

Puroindolines and Grain Softness Protein | α -Amylase Inhibitors (CM Proteins) | Lipid Transfer Proteins | α -Globulins
| 7S Storage Globulins | 11S Globulins/Triticin

Other Groups of Proteins with Functional Properties ♦ 272

Proteins Involved in Allergy and Intolerance | Surface-Active Proteins

Other Biologically Active Proteins ♦ 275

Wheat Germ Agglutinin | Wheatwin1 (PR4) | Ribosome-Inactivating Proteins | Thionins

Conclusions and a Forward Look ♦ 277

9. Carbohydrates. Bruce Stone and Matthew K. Morell || 299

Carbohydrates in Grain: Classification ♦ 299

Mono-, Di-, and Oligosaccharides ♦ 399

Fructans ♦ 300

Occurrence and Structure | Biosynthesis | Analysis

Wheat Starch—Structure, Synthesis, and Functionality ♦ 302

Starch Structure | Physicochemical Functionality of Wheat Starch | Synthesis of Wheat Starch
| Relationships Between Starch Synthesis, Structure, and Functionality | Starch and the Staling of Bread
| Starch and Nutrition | Future Directions

Cell Wall Polysaccharides ♦ 319

Occurrence, Composition, and Organization in Walls of Cell Types in Grain | Cellulose | Glucomannans | Arabinoxylans
| (1→3,1→4)-β-D-Glucans | Arabinogalactan-Peptides

Carbohydrates in Aleurone Protein Body Inclusions—Phytin Globoids and Niacytin Granules ♦ 336

Phytin Globoids | Niacytin Granules

Impact and Applications of Cell Wall Polysaccharides in Grain Utilization, End-Use Quality, and Nutrition ♦ 337

Milling and Conditioning | Bread and Other Baked Products | Applications of Arabinoxylans
| Nonstarch Polysaccharides in Human and Animal Nutrition

10. Wheat Lipids. Okkyung Kim Chung, Jae-Bom Ohm, M. S. Ram, Seok-Ho Park, and Crispin A. Howitt || 363

Wheat Lipid Classification ♦ 363

Saponifiable Lipids | Nonsaponifiable Lipids | Lipid Class by Location of Lipids in Wheat Structural Parts
| Lipid Class by Extraction Method and Lipid Solubility

Analytical Methods ♦ 367

Methods for Extraction of Lipid | Fractionation and Characterization

Lipids in Wheat Fractions and Wheat Classes ♦ 371

Wheat Flour Lipids | Carotenoids | Sterols | Tocol Derivatives | Wheat Straw Lipids and Waxes

Functional Roles of Wheat Lipids ♦ 383

Nutritional Roles | Roles as a Wheat Quality Index | Functional Roles in Wheat Products | Effects on Cookie Quality
| Effects on Cake Quality | Effects on Spaghetti and Noodles | Effects on Other Wheat Products

Genetic Research on Lipid-Related Components ♦ 389

Manipulating the Carotenoid Content of Wheat | Manipulating the Tocochromanol Content
| Manipulating the Fatty Acid Content of Seeds

Future Research ♦ 390

11. Enzymes and Enzyme Inhibitors Endogenous to Wheat. Kristof Brijs, Christophe M. Courtin, Hans Goesaert, Kurt Gebruers, Jan A. Delcour, Peter R. Shewry, Robert J. Henry, Jacques Nicolas, Jacques Potus, Rebeca Garcia, and Sylvie Davidou || 401

Hydrolytic Enzymes ♦ 401

Starch-Degrading Enzymes | Nonstarch Polysaccharide-Degrading Enzymes | Protein-Degrading Enzymes | Esterases

Inhibitors of Hydrolytic Enzymes ♦ 410

Inhibitors of Starch-Degrading Enzymes | Inhibitors of Nonstarch Polysaccharide-Degrading Enzymes
| Inhibitors of Protein-Degrading Enzymes | Inhibitors of Esterases

Oxidoreductases and Their Inhibitors ♦ 414

Lipoxygenase | Polyphenol Oxidase | Peroxidase | Catalase | Ascorbic Acid Oxidase
| Glutathione-Dehydroascorbate Oxidoreductase

Conclusion ♦ 423

12. Transgenic Manipulation of Wheat Quality. Huw D. Jones, Caroline A. Sparks, and Peter R. Shewry || 437

Development of Wheat Transformation Methods ♦ 437

Transgenics for Up- or Down-Regulation of Gene Expression | Targeting and Tagging Transgenes in the Endosperm
| Transgenic Approaches to Crop Improvement

Application of Transgenesis to Improve Grain Quality ♦ 441

Production of Lines Expressing HMW Subunit Transgenes | Effects of HMW Subunits on Functional Properties of Gluten
| Substantial Equivalence of Lines Expressing HMW Subunit Transgenes | Production and Properties of Lines Expressing
LMW Subunit Transgenes | Silencing Gliadins by RNAi Technology | Improvement of Nutritional Quality
| Reduction of Preharvest Sprouting | Prospects

Index || 453
