Volumes in the Series	xiii
Series Editor's Preface.	xliii
Preface.	xliv
Acronyms	xlvi

Chapter 1. Sampling and sample preservation for trace

<i>element analysis</i>	1
Byron Kratochvil	
1.1 Introduction.	1
1.2 Preliminary considerations	2
1.2.1 Sampling variability	2
1.2.2 Sampling strategies.	2
1.2.3 Uncertainties in sampling	3
1.3 Types of samples	3
1.3.1 Judgment samples	3
1.3.2 Random samples	4
1.3.3 Systematic samples	4
1.3.4 Subsamples	5
1.3.5 Composite samples	5
1.4 Planning the sampling operation	5
1.4.1 Defining goals.	5
1.4.2 Sampling plans	6
1.5 Statistical sampling.	8
1.5.1 Introduction.	8
1.5.2 Minimum number of increments	8
1.5.3 Minimum size of increments in well-mixed particulate populations	9
1.5.4 Sample increment size in segregated populations	10
1.5.5 From where should increments be taken?	11
1.5.6 Model-based sampling	12

Contents

1.5.7	Balancing economic factors and purpose of data collection against sample quality	13
1.6	Sample handling and preservation during collection, transport, and storage	14
1.6.1	Handling and storage of samples	14
1.6.2	Sampling equipment	16
1.6.3	Sample containers	16
1.7	Quality assurance in sampling [24,25]	17
1.7.1	Overall objectives	17
1.7.2	Quality control	17
1.7.3	Quality assessment	17
1.8	Glossary	18
	References	20
	Selected bibliography	21
<i>Chapter 2. Sources of analyte contamination and loss during the analytical process</i>		23
Gunter Knapp and Peter Schramel		
2.1	Introduction	23
2.2	Contamination	24
2.2.1	Materials	24
2.2.2	Reagents	27
2.2.3	Airborne particles	28
2.3	Losses	29
2.4	Sampling	34
2.5	Storage	35
2.6	Drying and homogenisation	37
2.7	Dilution, dissolution and digestion	39
2.8	Separation and preconcentration	41
2.9	Element measurement	42
	References	42
<i>Chapter 3. Calibration approaches for trace element determination</i>		47
Douglas C. Baxter and Ilia Rodushkin		
3.1	Introduction	47
3.2	Basic assumptions and some terminology	48
3.3	Selection of the calibration approach	49
3.4	Statistical evaluation of recovery data	52

Contents

3.5	Linear regression	55
3.5.1	Ordinary linear regression	56
3.5.2	Weighted linear regression	59
3.5.3	Linear regression for data with uncertainties in both variables	64
3.6	External calibration.	67
3.6.1	Estimating uncertainty	68
3.6.2	Optimizing precision	70
3.6.3	Accounting for non-constant sensitivity	72
3.7	Method of standard additions.	74
3.7.1	Estimating uncertainty	75
3.7.2	Optimizing precision	76
3.7.3	Accounting for non-constant sensitivity	78
3.8	Internal standardization	79
3.8.1	Estimating uncertainty	80
3.8.2	Optimizing precision	81
3.9	Isotope dilution	81
3.9.1	Mass discrimination and detector dead time	85
3.9.2	Estimating uncertainty	86
3.9.3	Optimizing precision	88
	Acknowledgements	90
	References	90
 <i>Chapter 4. Stated references for ensuring traceability of trace element analysis</i>		
	Philippe Quevauviller	
4.1	Introduction.	93
4.2	Meaning of traceability for chemical measurements	94
4.3	SI units	96
4.4	Documented standards	96
4.5	Reference methods	97
4.6	Reference materials.	99
4.6.1	The various categories of materials and related requirements	99
4.6.2	Production	100
4.6.3	Methods used for material characterisation or certification	102

Contents

4.6.4	Use of reference materials	102
4.6.5	Traceability of reference materials	103
4.7	Specimen banking	105
4.8	Proficiency testing	105
4.9	Real-case achievement of traceability of trace element analysis	106
4.9.1	Total trace element determinations	106
4.9.2	Operationally defined trace element determinations	108
4.9.3	Determinations of chemical forms of elements	110
4.10	Conclusions	113
	References	114
 <i>Chapter 5. Detection methods for the quantitation of trace elements</i>		
	Les Ebdon, Andrew S. Fisher, Maria Betti and Maurice Leroy	117
5.1	Introduction	117
5.2	Classical methods	117
5.3	Flame spectrometry	118
5.3.1	Introduction	118
5.3.2	Theory	118
5.3.3	Instrumentation	119
5.3.4	Interferences and background correction techniques	121
5.3.5	Conventional nebulisation	123
5.3.6	Alternative methods of sample introduction	127
5.4	Electrothermal AAS	135
5.4.1	Introduction	135
5.4.2	Conventional ET-AAS	136
5.4.3	Multi-element ET-AAS	139
5.4.4	Chemical vapour generation-ET-AAS	140
5.4.5	Speciation	141
5.5	Inductively coupled plasma-atomic emission spectrometry	142
5.5.1	Introduction	142
5.5.2	Theory and interferences	142

Contents

5.5.3	Instrumentation	143
5.5.4	Figures of merit	152
5.6	Inductively coupled plasma-mass spectrometry	152
5.6.1	Introduction	152
5.6.2	Theory	153
5.6.3	Instrumentation	154
5.6.4	Different types of analysis	156
5.6.5	Interferences	156
5.6.6	Sample introduction techniques	158
5.6.7	Figures of merit	160
5.7	Atomic fluorescence spectrometry	160
5.7.1	Introduction	160
5.7.2	Theory	162
5.7.3	Instrumentation	162
5.7.4	Sample introduction	163
5.7.5	Interferences	163
5.7.6	Figures of merit	163
5.8	Other atomic absorption, emission and fluorescence methods of detection	164
5.8.1	Microwave induced plasma	164
5.8.2	Direct current plasma	165
5.9	Secondary ion mass spectrometry	165
5.9.1	Introduction	165
5.9.2	Practical principles	167
5.9.3	Sensitivity and quantification	168
5.10	Glow discharge mass spectrometry	171
5.10.1	Introduction	171
5.10.2	Glow discharge processes	173
5.10.3	Applications to trace element analysis	175
5.11	X-ray fluorescence spectrometry	176
5.11.1	Introduction	176
5.11.2	Instrumentation	177
5.11.3	Matrix effects	177
5.11.4	Quantitative and trace analysis	178
5.12	UV/Visible spectrophotometric and chemiluminescence techniques	179
5.12.1	UV/Visible spectrophotometric techniques	179

Contents

7.3.1	Particular case of plant matrices	243
7.4	Methodology	244
7.4.1	Heating devices	244
7.4.2	Ashing vessels	245
7.4.3	Influence of the sample composition	246
7.4.4	Operating modes for environmental samples	246
7.5	Particular cases of arsenic and selenium	248
7.5.1	Ashing aids	250
7.5.2	What to do?	251
7.6	Conclusions	253
	References	254
<i>Chapter 8. Microwave based extraction</i>		257
Edward E. King and David Barclay		
8.1	Introduction.	257
8.2	Brief history of industrial microwave devices.	257
8.3	Microwave theory.	258
8.4	Microwave laboratory equipment.	263
8.4.1	Magnetron	264
8.4.2	Power application	267
8.4.3	Waveguide	267
8.4.4	Microwave cavity	267
8.4.5	Reflected energy	267
8.4.6	Mode stirrer and turntables	268
8.4.7	Microwave compatible materials	269
8.5	Vessels	270
8.5.1	Materials	271
8.5.2	Structural components	272
8.5.3	Safety	272
8.5.4	Closed vessels	273
8.5.5	Vent and reseal vessels	274
8.5.6	Open vessels	274
8.6	Control systems	275
8.6.1	Power/time	275
8.6.2	Pressure.	275
8.6.3	Temperature	278

Contents

8.6.4	Power optimization feedback	280
8.7	Methodology	281
8.7.1	Pressurized closed vessel extractions	282
8.7.2	Atmospheric open vessel extractions	283
8.8	Sample types	285
8.8.1	Inorganic	285
8.8.2	Leaches and other partial extractions	286
8.8.3	Complete dissolutions	287
8.8.4	High-temperature extractions	288
8.8.5	Complex sequential extractions	290
8.8.6	Organic	291
8.8.7	Carbohydrates	292
8.8.8	Proteins	293
8.8.9	Fats, oils, and waxes	294
8.9	Advanced applications	297
8.9.1	Clean chemistry	297
8.9.2	Concentration/evaporation	297
8.10	Conclusions	298
	Acknowledgements	299

<i>Chapter 10. Supercritical fluid extraction</i>	313
Roberto Alzaga, Sergi Díez and Josep M. Bayona	
10.1 Properties of supercritical fluids	313
10.2 Instrumentation	316
10.2.1 Experimental solubility measurements	318
10.3 SFE of trace elements.	318
10.3.1 Ligand solubility in SFs.	326
10.3.2 Complex-SF solubility	328
10.3.3 SFE process	328
10.4 Organometallic compounds	332
10.4.1 Organotin compounds.	332
10.4.2 Organomercury compounds.	338
10.4.3 Organolead compounds	339
10.4.4 Arsenic compounds	339
10.5 Conclusion	339
References	340
<i>Chapter 11. Accelerated solvent extraction of organometallic and inorganic compounds</i>	343
John L. Ezzell	
11.1 Accelerated solvent extraction as a sample preparation technique	343
11.1.1 Introduction.	343
11.1.2 Basic principles of ASE operation.	344
11.1.3 ASE instrumentation	345
11.1.4 ASE methods development	346
11.1.5 Application areas	349
11.1.6 Summary	351
References	352
<i>Chapter 12. Sonication as a sample preparation method for elemental analysis</i>	353
Kevin Ashley	
12.1 Introduction.	353
12.2 Methodological considerations	354
12.3 Historical background	357

<i>Chapter 14. Solid-phase extraction</i>	393
Valérie Camel	
14.1 Introduction.	393
14.2 Theory	393
14.2.1 Presentation of the technique.	394
14.2.2 Operation	400
14.2.3 Advantages of the technique	403
14.3 Step-by-step method development guide	410
14.3.1 Selection of solid sorbent	410
14.3.2 Influential parameters	432
14.4 Applications of SPE to the determination of some trace elements	439
14.4.1 Chromium.	439
14.4.2 Iron	443
14.4.3 Mercury	445
14.4.4 Selenium	445
14.4.5 Tin	445
14.5 Conclusion	450
References	451
 <i>Chapter 15. Chelation solvent extraction for separation of metal ions</i>	459
Hideyuki Itabashi and Taketoshi Nakahara	
15.1 Introduction.	459
15.2 Theoretical considerations	460
15.2.1 General principles	460
15.2.2 Preconcentration of metal ions	465
15.2.3 Mutual separation of metal ions	467
15.2.4 Speciation of metal ions in natural water.	472
15.3 Adsorption of metal ions using chelating resins	474
15.3.1 General principles	475
15.3.2 Features of some chelating resins	475
15.4 Application of chelation to sample preparation for trace metal analysis.	477
15.4.1 Procedure for the extraction of metal ions from natural waters.	477

Contents

15.4.2	Procedure for the extraction of metal ions from high-purity materials and inorganic solid samples	488
15.4.3	Procedure for the extraction of metal ions from biological samples	490
15.4.4	Procedure for the speciation of metal ions in natural waters	491
	References	492
<i>Chapter 16. Cryogenic trapping for speciation analysis</i>		495
Marie-Pierre Pavageau, Eva Krupp, Alberto de Diego, Christophe Pécheyran and Olivier F.X. Donard		
16.1	Introduction.	495
16.2	Definition of volatile species	502
16.3	Physico-chemical principles and processes associated with cryofocusing	504
16.4	Analytical constraints.	509
16.4.1	Removal of CO ₂	510
16.4.2	Water removal	512
16.5	Sample preservation and stability	517
16.6	Instrumentation for cryogenic trapping and selected applications.	520
16.6.1	Cryosampler for determination of industrial and environmental VMCs	520
16.6.2	Cryogenic trapping for speciation analysis	523

<i>Chapter 21. Flow injection techniques for sample pretreatment</i>	<i>611</i>
Zhao-Lun Fang	
21.1 Introduction	611
21.1.1 General	611
21.1.2 General features of flow injection on-line sample pretreatment systems.	612
21.1.3 Classification of FI sample pretreatment systems.	612
21.1.4 Principles and general guidelines for the development of FI systems	613
21.1.5 Practical hints for manipulation of FI equipment	614
21.2 FI liquid-liquid extraction systems.	615
21.2.1 Introduction	615
21.2.2 Apparatus for FI liquid-liquid extraction	617
21.2.3 Guidelines for the development of FI liquid-liquid extraction systems	623
21.2.4 Typical manifolds for FI liquid-liquid extraction	624
21.3 FI solid phase extraction systems.	626

21.3.1	Introduction.	626
21.3.2	Sorption media for FI solid phase extraction . .	627
21.3.3	Guidelines for the development of FI solid phase extraction systems	629
21.3.4	Typical manifolds for FI solid phase extraction .	630
21.4	FI vapor generation systems	635
21.4.1	Introduction.	635
21.4.2	Gas-liquid separators for FI vapor generation .	635
21.4.3	Guidelines for development of FI vapor generation systems	636
21.4.4	Typical FI manifolds for VG-AAS	638
21.5	FI gas diffusion systems	641
21.5.1	General	641
21.5.2	Gas-diffusion separators	641
21.5.3	Typical FI manifolds for gas-diffusion separation and preconcentration	642
21.6	FI on-line sample digestion	643
21.6.1	Introduction.	643
21.6.2	FI on-line sample digestion systems for AAS . .	644
21.6.3	FI digestion systems coupled to VG-AAS	644
21.6.4	FI systems for digestion of solid samples in AAS	645
21.6.5	FI pretreatment systems with on-line photo-oxidation by UV irradiation	646

 <i>Chapter 24. Sample preparation of geological samples, soils and sediments</i>		
	Philip J. Potts and Philip Robinson	
24.1	Introduction.	723
24.2	Sample preparation	723
24.2.1	Sample collection	724
24.2.2	Crushing and grinding	726
24.2.3	Selecting an appropriate test portion	727
24.3	Choice of approach	728
24.3.1	Fitness-for-purpose	728
24.3.2	Choice of sample preparation procedure based on choice of technique.	728
24.3.3	Choice of sample preparation based on the characteristics of elements	729
24.4	Methods that do not require any sample digestion— <i>in situ</i> methods of analysis	730
24.4.1	Portable X-ray fluorescence	730
24.4.2	Gamma spectrometry	732
24.4.3	Laser ablation techniques and other microprobe/microanalytical techniques	732
24.5	Methods based on solid samples	733
24.5.1	Direct determinations on powders	733
24.5.2	Powder pellet for XRF	734
24.5.3	Glass disks for XRF trace determinations . . .	734
24.6	Dissolution methods based on acid attack	735
24.6.1	Properties of acids used in the decomposition of geological materials.	736
24.6.2	Open vessel and low-pressure acid digestion . .	738

Contents

24.6.3	HF-HNO ₃ decomposition method in Savillex [®] screw top vials	740
24.6.4	Closed vessel high pressure acid digestion . . .	740
24.6.5	HF/H ₂ SO ₄ decomposition method in closed, high pressure vessels	742
24.6.6	HF/HClO ₄ -HCl decomposition method in closed, high pressure vessels	742
24.6.7	Microwave oven digestion.	743
24.6.8	Partial acid attack	744
24.6.9	Difficult minerals	745
24.7	Decomposition by molten salt fusion	750
24.7.1	Total fusion	750
24.7.2	A LiBO ₂ fusion procedure	752
24.7.3	Sintering	752
24.7.4	Fire assay	752
24.8	Pre-concentration and separation procedures	753
24.8.1	Ion exchange	753
24.8.2	Solvent extraction and co-precipitation	754
24.8.3	Vapour generation	755
24.9	Sequential extractions and dissolutions	755
24.9.1	Procedure of Tessier et al.	756
24.9.2	The "BCR" method	757
24.9.3	Selective extractions for geochemical exploration	757
24.10	Summary and conclusions	758

<i>Chapter 27. Aerosol sampling and sample preparation for elemental analysis</i>	903
József Hlavay	
27.1 Introduction	903
27.1.1 Objectives of monitoring	904
27.2 Sampling of aerosols	906
27.2.1 General considerations	906
27.2.2 Sampling of aerosol by impactors	909
27.2.3 Ambient sampling for the respirable fraction	916
27.2.4 High-volume aerosol samplers	918
27.2.5 Speciation aerosol sampling system	922
27.2.6 Passive samplers	924
27.3 Sequential extraction schemes for aerosol samples	924
27.4 Discussion	930
Acknowledgements	931
General terms used in sampling	931
References	932
 <i>Chapter 28. Sample preparation for industrial waste analysis</i>	935
Peter Drouin and Ray E. Clement	
28.1 Types of industrial waste	935
28.2 Safety considerations for industrial waste analysis	936
28.3 Sample characteristics and industrial waste sampling	936
28.4 Digestions	938
28.4.1 Aqueous sample types—US EPA methods	939
28.4.2 Solid sample types—US EPA methods	942
28.4.3 Reported studies—hot plate digestion	943
28.4.4 Reported studies—microwave digestion methods	945
28.4.5 Ultrasound-assisted extractions	949
28.4.6 Alkaline digestions	949
28.4.7 Laboratory safety	950
28.5 Leach procedures	950
28.5.1 Toxicity characteristic leaching procedure	951
28.5.2 TCLP regulatory limits	951

Contents

28.5.3	TCLP method summary.	952
28.5.4	TCLP applications	953
28.5.5	TCLP and sequential extractions	954
28.5.6	TCLP limitations	956
28.6	Certified reference materials	957
28.7	Summary and future developments.	957

Chapter 29. Sample preparation for semiconductor materials. . . 965

Katsu Kawabata, Yoko Kishi, Fuhe Li and Scott Anderson

29.1	Introduction.	965
29.2	Contamination control	969
29.2.1	Clean room	969
29.2.2	Equipments, reagents and standards.	971
29.3	Sample preparation	976
29.3.1	Preparation and analysis of samples	978
29.4	Conclusion	986
	References	986

TRACE ELEMENT SPECIATION

Chapter 30. Sampling and sample treatment in the analysis of organotin compounds in environmental samples 991

Roberto Morabito

30.1	Introduction.	991
30.2	Critical steps in organotin analysis.	994
30.2.1	Sampling	994
30.2.2	Storage	998
30.2.3	Sample treatment.	1000
30.3	Improving the quality of organotin measurements in Europe	1005
30.4	Detailed procedure for the GC-MS determination of organotin compounds in environmental samples	1017
	Acknowledgements	1020
	References	1021

<i>Chapter 31. Sample preparation for arsenic speciation</i>	<i>1027</i>
Walter Goessler and Doris Kuehnelt	
31.1 Introduction	1027
31.2 Occurrence and distribution of arsenic in the environment	1028
31.2.1 Marine environment	1028
31.2.2 Terrestrial environment	1031
31.2.3 Humans	1031
31.3 Stability of arsenic compounds	1033
31.3.1 Arsenite and arsenate	1034
31.3.2 Methylarsonous acid and dimethylarsinous acid	1035
31.3.3 Methylarsonic acid and dimethylarsinic acid	1036
31.3.4 Arsenobetaine, arsenocholine, trimethylarsine oxide, and the tetramethylarsonium ion	1037
31.3.5 Arsenosugars	1037
31.4 Extraction of arsenic compounds from environmental samples	1038
31.5 Conclusions	1041
References	1041
 <i>Chapter 32. Sample preparation for speciation of selenium.</i>	 <i>1045</i>
Claudia Ponce de Leon, Anne P. Vonderheide and Joseph A. Caruso	
32.1 Why selenium speciation?	1045
32.2 General sample preparation	1045
32.3 Mammals	1046
32.3.1 Body fluid analysis	1046
32.3.2 Tissue sample analysis	1049
32.4 Fish/birds	1050
32.5 Plants	1051
32.5.1 Leafy plants	1052
32.5.2 Broccoli	1053
32.5.3 Spices (garlic, onion, white clover)	1053
32.5.4 Grains	1054
32.5.5 Nuts	1054

Contents

32.5.6	Mushrooms	1054
32.6	Microorganisms	1055
32.7	Environmental	1055
32.7.1	Air.	1055
32.7.2	Water	1056
32.7.3	Soil and sediments (solid matrices)	1058

<i>Chapter 34. Sample preparation for speciation of lead</i>	1081
Freddy C. Adams and Monika Heisterkamp	
34.1 Introduction.	1081
34.2 Toxicity of organolead compounds	1083
34.3 The history of leaded gasoline	1085
34.4 Properties of organolead compounds	1088
34.5 Synthesis of organolead compounds	1090
34.6 The biogeochemical cycle of lead	1092
34.7 Analytical techniques for speciation analysis of organolead compounds	1092
34.7.1 Hyphenated techniques for organometal determinations	1093
34.7.2 Sample preparation	1096
34.7.3 Sample pretreatment using gas chromatographic separation	1097
34.7.4 Extraction recovery	1100
34.7.5 Separation	1101
34.7.6 Detection of organolead compounds after chromatography.	1104
34.7.7 Procedures for the determination of organolead compounds in dust material	1107
34.7.8 Comparison of the different hyphenated systems	1109
References	1111
<i>Chapter 35. Sample preparation for chromium speciation</i>	1115
Miguel de la Guardia and Angel Morales-Rubio	
35.1 The element and its reactivity	1115
35.2 The presence of Cr in nature and industrial processes .	1117
35.3 Chemical species of Cr present in real samples.	1118
35.4 Analytical methodologies available for determination of Cr	1120
35.5 Analytical methodologies for Cr speciation in water .	1120
35.5.1 Speciation of chromium in aqueous matrices . .	1121
35.5.2 Types of samples analyzed	1121
35.5.3 Pretreatments and techniques applied	1123

Contents

35.5.4	Speciation chromium using atomic spectrometry and MS-based techniques	1124
35.5.5	Determination of chromium speciation using molecular spectrophotometry	1130
35.6	Analytical methodologies for Cr speciation in biological fluids	1136
35.6.1	Speciation of chromium in biological fluids	1136
35.6.2	Types of samples analyzed	1137
35.6.3	Pretreatments and techniques applied	1137
35.6.4	Chromium speciation using atomic spectrometry detection	1138
35.6.5	Chromium speciation using molecular spectrophotometry detection	1143
35.7	Analytical methodologies for speciation of Cr in solid samples	1145
35.7.1	Speciation of chromium in solid samples	1145
35.7.2	Types of samples analyzed	1145
35.7.3	Solid sample treatments for speciation of chromium	1155
35.8	Final considerations	1157
