FUNDAMENTALS AND APPLICATIONS

HEINRICH KUTTRUFF

*Professor of Technical Acoustics,
Technische Hochschule Aachen, Germany*

ELSEVIER APPLIED SCIENCE
LONDON AND NEW YORK

CONTENTS

	<i>Preface</i>	v
I	Introduction	1
I.1	What is ultrasound?	1
I.2	A few historical remarks	3
I.3	Ultrasound in the living world	5
I.4	Upper frequency limit of sound	7
II	Basic Concepts of Acoustics	11
II.1	Sound fields and the physical quantities describing them	11
II.2	Sound propagation in gases and liquids	15
	II.2.1 Basic relations between acoustical quantities, the wave equation	15
	II.2.2 Plane waves and spherical waves	17
	II.2.3 Energy density and intensity level	22
	II.2.4 Nonlinear effects	24
II.3	Sound waves in solids	30
II.4	Reflection and refraction	38
II.5	Doppler effect	46
III	Sound Radiation and Sound Diffraction	49
III.1	Signals in time and frequency representation, linear systems	50
III.2	The principle of point source synthesis, the moving piston	53
III.3	Radiation from a circular piston	58
	III.3.1 Transient radiation	58
	III.3.2 Steady-state radiation	63
	III.3.3 Total power radiated, radiation resistance . . .	69
III.4	Piston with non-uniform surface velocity	71
III.5	Diffraction and scattering	72
		ix

CONTENTS

IV	Generation of Ultrasound—Part I	79
IV.1	The piezoelectric effect	80
IV.2	Piezoelectric materials	86
IV.3	Basic piezoelectric equations, electro-mechanical coupling factor	89
IV.4	Dynamic characteristics of piezoelectric transducers operated in their thickness mode	94
IV.4.1	Transducer loaded on both sides with media of equal characteristic impedance, $Z_2 = Z_1$	97
IV.4.2	Transducer unloaded at its rear side, $Z_2 = 0$	105
IV.4.3	Transducer kept rigid on its rear side, $Z_2 = \infty$	106
IV.4.4	Transducer matched at its rear side, $Z_2 = Z_0$	106
IV.5	Mechanical and electrical equivalent circuit of a piezoelectric transducer near its resonance	109
IV.6	Practical design of piezoelectric ultrasound generators	112
V	Generation of Ultrasound—Part II	119
V.1	Composite piezoelectric transducers	119
V.2	Piezoelectric bending transducers	122
V.3	Generation of high frequency ultrasound	124
V.4	Concentration of ultrasound by focusing	126
V.5	Generation of high vibrational amplitudes	130
V.5.1	Stepped transformer	131
V.5.2	Conical transformer	132
V.5.3	Exponential transformer	134
V.6	Generation of shear waves and Rayleigh waves	135
V.7	Magnetostrictive generation of ultrasound	139
V.8	Electrostatic ultrasound generators	145
V.9	Mechanical methods	148
VI	Detection and Measurement of Ultrasound	153
VI.1	Detection of ultrasound with extended piezo transducers, reciprocity	154
VI.2	Electrostatic receivers	160
VI.3	Ultrasound microphones, calibration	161
VI.4	Mechanical detection	167
VI.5	Thermal ultrasound detectors	170
VI.6	Diffraction of light by ultrasound waves	171

VI.6.1	Debye–Sears effect	171
VI.6.2	Diffraction of light by shear waves	177
VI.6.3	Bragg diffraction	178
VI.7	Visualization of ultrasound	180
VII	Generation and Detection of Sound with Frequencies above 1 GHz (Hypersound)	187
VII.1	Coherent methods for the generation and detection of hypersound	188
VII.2	Phonons (sound quanta) in solids	191
VII.3	Quantum acoustical interpretation of some effects of ultrasound	193
VII.4	Generation of hypersound with heat pulses	195
VII.5	Detection of hypersound with superconducting bolo- meters	197
VII.6	Generation and detection of incoherent hypersound with superconducting tunnel contacts	199
VII.7	Detection of ‘natural’ hypersound	203
VIII	Absorption of Ultrasound	207
VIII.1	Classical sound absorption in gases and liquids	208
VIII.2	Molecular sound absorption in gases	210
VIII.3	Sound absorption in liquids	217
VIII.4	Sound absorption in solids	221
VIII.4.1	Polycrystalline materials	223
VIII.4.2	Sound absorption due to dislocations	226
VIII.4.3	High polymers	229
VIII.4.4	Sound absorption due to interaction with thermal phonons	231
VIII.4.5	Sound absorption due to interaction with electrons	232
VIII.5	Experimental methods for the determination of sound velocity and attenuation in the ultrasonic range	233
IX	Applications in Signal Processing and Measuring Techn- iques	241
IX.1	Ultrasonic delay lines	242
IX.1.1	Lines with monomode propagation	245
IX.1.2	Lines with multimode propagation	247

CONTENTS

IX.2	Rayleigh wave filters	250
IX.2.1	The interdigital transducer as a transversal filter	251
IX.2.2	Real Rayleigh wave filters	254
IX.2.3	Delay lines	256
IX.2.4	Further SAW devices	259
IX.2.5	Fabrication of SAW devices	260
IX.3	Light modulation and light deflection	262
IX.4	Other small-signal applications	264
X	Non-destructive Testing of Materials	269
X.1	Survey of various testing methods	270
X.2	Impulse echo method	273
X.3	Frequencies and wave types	277
X.4	Transducers for flaw detection	279
X.5	Types of display	284
X.6	Suitability of materials for testing	287
X.7	Practical examples of ultrasonic flaw detection	290
XI	Application of Ultrasound in Medical Diagnostics	297
XI.1	Acoustic properties of biological tissue	298
XI.2	Impulse echo method	300
XI.2.1	Time gain control	301
XI.2.2	Transducers	302
XI.2.3	Modes of display	306
XI.2.4	Scanning	308
XI.3	Typical applications of the impulse echo method in sonography	312
XI.3.1	Internal medicine	312
XI.3.2	Gynaecology and obstetrics	315
XI.3.3	Cardiography	317
XI.3.4	Encephalography	318
XI.3.5	Ophthalmology	320
XI.3.6	Ultrasound-guided aspiration	321
XI.4	Doppler sonography	322
XII	Special Methods of Ultrasonic Imaging	325
XII.1	Ultrasonic microscopy	326
XII.1.1	Microscopes with extended sensors	327

	XII.1.2	Scanning acoustic microscopes (SAM)	328
	XII.1.3	Transducer and lens	330
	XII.1.4	Coupling liquid	332
	XII.1.5	Applications	334
XII.2		Acoustic holography	337
	XII.2.1	Ultrasonic holography with optical reconstruction	341
	XII.2.2	Computer reconstruction	345
	XII.2.3	Estimation of axial resolution	348
	XII.2.4	Wide-band methods	350
XII.3		Ultrasonic tomography	351
	XII.3.1	Algebraic reconstruction	355
	XII.3.2	Reconstruction by Fourier transformation	357
	XII.3.3	Reflection tomography	358
XIII		Cavitation	363
XIII.1		Basic types of sonically induced cavitation	364
XIII.2		Dynamics of a single cavity	365
	XIII.2.1	Implosion of a gas-free cavity at constant external pressure	367
	XIII.2.2	Bubble oscillation in a stationary sound field	370
	XIII.2.3	Transition to 'hard' cavitation	376
XIII.3		Cavitation nuclei and cavitation thresholds	377
XIII.4		Real cavitation and some effects caused by it	384
	XIII.4.1	Erosion of solid materials	389
	XIII.4.2	Sonoluminescence	392
	XIII.4.3	Sonochemical reactions	393
XIV		Applications of High Intensity Ultrasound	395
XIV.1		Ultrasonic cleaning	397
	XIV.1.1	Cleaning tanks	399
	XIV.1.2	Sound generation, operating frequencies and powers	402
	XIV.1.3	Cleaning liquids	403
	XIV.1.4	Cleaning procedure	404
XIV.2		Joining with ultrasound	406
	XIV.2.1	Mechanism of welding plastics	406
	XIV.2.2	Welding equipment	410
	XIV.2.3	Applications of ultrasonic welding of plastics	412

CONTENTS

XIV.2.4	Riveting and insertion of metal parts	413
XIV.2.5	Welding of metals	414
XIV.2.6	Ultrasonic soldering	417
XIV.3	Machining	417
XIV.4	Production of dispersions	420
XIV.5	Further applications	426
XIV.6	Medical therapy	428
XV	On the Possibility of Health Risks Caused by Ultra-	
	sound	431
XV.1	Damage to tissue caused by diagnostic ultrasound . . .	431
XV.1.1	Heating	432
XV.1.2	Mechanical stress	433
XV.1.3	Cavitation	433
XV.2	Damage caused by airborne ultrasound	435
