Chapter 1 Introduction

Chapter 2 Comparison of photon and thermal detector performance

2.1	Introduction	5
2.2	Fundamental limits to infrared detector performance	6
2.2.1	Photon detectors	9
2.2.2	Thermal detectors	18
2.2.3	Comparison of the fundamental limits of photon and thermal detectors	21
2.3	Focal plane array performance	23
2.4	FPA's of photon detectors	26
2.4.1	InSb photodiodes	30
2.4.2	HgCdTe photodiodes	33
2.4.3	Photoemissive PtSi Schottky-barrier detectors	36
2.4.4	Extrinsic photoconductors	36
2.4.5	GaAs/AlGaAs QWIPs	38
2.4.6	QWIP versus HgCdTe in the LWIR spectral region	39
2.5	Dual-band FPA's	52
2.5.1	Dual-band HgCdTe	53
2.5.2	Dual-band QWIPs	54
2.6	FPA's of thermal detectors	58
2.6.1	Micromachined silicon bolometers	58
2.6.2	Pyroelectric arrays	61
2.6.3	Thermoelectric arrays	64
2.6.4	Status and trends of uncooled arrays	65
2.7	Conclusions	67
	Appendix	70
	References	75

Chapter 3	GaAs/AlGaAs based quantum well infrared photodetector focal plane arrays	
3.1	Introduction	83
3.2	Detectivity D^* comparison	89
3.3	Effect of nonuniformity	91
3.4	640×512 pixel long-wavelength portable QWIP camera	92
3.5	640×486 long-wavelength dual-band imaging camera	99
3.6	640×512 pixel broad-band QWIP imaging camera	102
3.7	640×512 spatially separated four-band QWIP focal plane array	110
3.8	QWIPs for low background and low temperature operation	113
3.9	Summary	115
	Acknowledgements	117
	References	117
Chapter 4	GaInAs(P) based QWIPs on GaAs, InP and Si substrates for focal plane arrays	
4.1	Introduction	121
4.1.1	Overview of infrared detector	121
4.1.2	Quantum well infrared photodetector	123
4.1.3	State-of-the-art	125
4.2	Fundamentals of QWIP	126
4.2.1	Intersubband absorption	126
4.2.2	QWIP parameters	130
4.2.3	Comparison of n-type and p-type QWIPs	133
4.2.4	Growth, fabrication and device characterization of a single QWIP device	134
4.3	Fabrication of infrared FPA	135
4.3.1	Infrared FPA fabrication steps	135
4.3.2	Indium solder bump fabrication steps	139
4.3.3	ROIC for infrared FPA	140
4.4	p-type QWIPs	141
4.4.1	p-type MWIR QWIPs	142
4.4.2	p-type LWIR QWIPs	144
4.5	n-type QWIPs	144
4.5.1	n-type LWIR QWIPs	144
4.5.2	n-type VLWIR QWIPs	146
4.5.3	Multi-color QWIPs	147
4.6	Low cost QWIP FPA integrated with Si substrate	147
4.6.1	Overview of QWIPs on Si	147
4.6.2	Growth of GaInAs/InP QWIP-on-Si	148
4.6.3	Detector performance of GaInAs/InP QWIP-on-Si	148
4.6.4	How to fabricate a monolithic integrated FPA with Si substrate	151

4.7	New approaches of QWIP	151
4.8	Conclusions	153
	References	154
Chapter 5	InAs/(GaIn)Sb superlattices: a promising material system for infrared detection	
5.1	Introduction	159
5.2	Materials properties	159
5.2.1	Bandstructure of InAs/(GaIn)Sb superlattices	159
5.2.2	X-ray characterization	163
5.2.3	Interfaces	165
5.2.4	Sample homogeneity	167
5.2.5	Residual doping	167
5.3	Superlattice photodiodes	169
5.3.1	Diode structure	169
5.3.2	Diode processing	172
5.3.3	Photo response	172
5.3.4	I-V measurements	173
5.3.5	C-V measurements	181
5.3.6	Noise measurements	183
5.4	Summary and outlook	187
	References	187
Chapter 6	GaSb/InAs superlattices for infrared FPAs	
6.1	Type-II heterostructures	191
6.1.1	Historical review	191
6.1.2	Definition of type-II band alignment	191
6.1.3	Features of type-II band alignment and their applications	192
6.2	Type-II infrared detectors	193
6.2.1	Principle of operation	193
6.2.2	Band structure of type-II superlattices	193
6.2.3	Optical absorption in type-II superlattices	194
6.2.4	Modeling and simulation of type-II superlattices	197
6.3	Experimental results from type-II photoconductors	201
6.3.1	Uncooled type-II photoconductors in the $\lambda=8-12\ \mu\text{m}$ range	201
6.3.2	Cooled type-II photoconductors for $\lambda > 20\ \mu\text{m}$	208
6.4	Experimental results from type-II photodiodes	211
6.4.1	Uncooled type-II photodiodes in the $\lambda=8-12\ \mu\text{m}$ range	211
6.4.2	Cooled type-II photodiodes in the $\lambda > 14\ \mu\text{m}$ range	215
6.5	Future work	227
	References	231

Chapter 7	MCT properties, growth methods and characterization	
7.1	Preface	233
7.2	Introduction	233
7.2.1	Brief history	234
7.3	MCT Characteristics and material properties	235
7.3.1	Composition and crystal structure	235
7.3.2	Bandgap	236
7.3.3	Intrinsic carrier concentration	238
7.3.4	Doping and impurities	239
7.3.5	Carrier mobility	240
7.3.6	Carrier lifetime	241
7.3.7	Defects	245
7.4	MCT crystal growth methods	245
7.4.1	Phase diagrams	246
7.4.2	Bulk growth	247
7.4.3	Epitaxial growth	248
7.5	Material characterization methods	256
7.5.1	Material composition	256
7.5.2	Measurements of carrier concentration and mobility	260
7.6	Summary	260
	References	260
Chapter 8	HgCdTe 2D arrays – technology and performance limits	
8.1	Introduction	269
8.1.1	Historical perspective	270
8.2	Applications and sensor design	271
8.3	Comparison of HgCdTe with other 2D array materials	274
8.4	Multiplexers for HgCdTe 2D arrays	276
8.4.1	Photocurrent injection techniques	277
8.4.2	Scanning architectures	278
8.4.3	Future trends	279
8.5	Theoretical foundations for HgCdTe array technology	279
8.5.1	Thermal diffusion currents in HgCdTe	280
8.5.2	Leakage currents	281
8.5.3	Photocurrent and quantum efficiency	282
8.6	Technology of HgCdTe photovoltaic devices	282
8.6.1	Materials growth technology	284
8.6.2	Junction forming techniques in homojunction arrays	287
8.6.3	Device structures	288
8.7	Measurements and figures of merit for 2D arrays	292
8.7.1	NETD – theoretical calculation	293
8.7.2	NETD – experimental measurement	294
8.7.3	Relationship of NETD with other figures of merit	294

8.8	HgCdTe 2D arrays for the 3–5 μm (MW) band	296
8.9	HgCdTe 2D arrays for the 8–12 μm (LW) band	296
8.9.1	Array design issues	296
8.9.2	Introduction to performance limitations in LW arrays	297
8.9.3	Cause of defective elements in HgCdTe 2D arrays	298
8.10	HgCdTe 2D arrays for the 1–3 μm (SW) band	299
8.11	Towards GEN III detectors	301
8.11.1	Two-colour array technology	301
8.11.2	Higher operating temperature (HOT) device structures	303
8.11.3	Retina level processing	304
8.12	Conclusion and future trends	304
	Acknowledgements	305
	References	305

Chapter 9. Status of HgCdTe MBE technology

9.1	Introduction	309
9.2	HgCdTe MBE equipment and process sensors	310
9.2.1	Vacuum equipment and sources	310
9.2.2	HgCdTe MBE process sensors	312
9.3	HgCdTe MBE growth process	318
9.3.1	Substrate preparation	318
9.3.2	Growth conditions	320
9.3.3	Defects	320
9.3.4	Doping	322
9.4	Device applications	324
9.4.1	Multispectral HgCdTe infrared detectors	324
9.4.2	Near-infrared avalanche photodiodes	331
9.4.3	High-performance MWIR detectors	337
9.4.4	Large-format arrays on silicon substrates	341
	Acknowledgements	348
	References	348

Chapter 10 Silicon infrared focal plane arrays

10.1	Introduction	353
10.2	Cooled FPAs	354
10.2.1	Schottky-barrier FPAs	354
10.2.2	Heterojunction internal photoemission FPAs	371
10.3	Uncooled FPAs	374
10.3.1	Silicon On Insulator (SOI) diode FPAs	374
10.3.2	Si-based resistance bolometer FPAs	379
10.3.3	Thermopile FPAs	383
10.4	Summary	386
	References	387

Chapter 11 Infrared silicon/germanium detectors

11.1	Introduction	393
11.2.	Near Infrared detectors	398
11.2.1	General operation principle	398
11.2.2	Detector growth and fabrication	403
11.2.3	Results and discussion	408
11.3	Mid- and long-wavelength SiGe IR detectors	411
11.3.1	Introduction	411
11.3.2	Principle of operation of HIP detectors	412
11.3.3	Growth and material characterization	413
11.3.4	Experimental results and discussion	421
11.3.5	Calculation of optical properties of SiGe HIP detectors	438
11.3.6	Résumé and outlook for SiGe MWIR detectors	444
	Acknowledgements	445
	References	445

Chapter 12 PolySiGe uncooled microbolometers for thermal IR detection

12.1	Introduction	449
12.1.1	Uncooled resistive microbolometers	449
12.1.2	Microbolometer terminology	451
12.1.3	Microbolometer process options	452
12.2	Structural, thermal and electrical properties of polySiGe	453
12.2.1	Deposition of polySiGe	453
12.2.2	Structural properties	454
12.2.3	Thermal properties	455
12.2.4	Electrical properties	455
12.2.5	High-temperature vs. low-temperature polySiGe	457
12.3	PolySiGe bolometer pixels	457
12.3.1	Process development	457
12.3.2	Absorber comparison and trade-offs	459
12.3.3	Pixel optimization	460
12.3.4	Vapor HF processing	462
12.3.5	Stiffness enhancement techniques	463
12.4	Readout and system development	467
12.4.1	Introduction	467
12.4.2	Readout of polySiGe bolometer arrays	468
12.5	Zero-level vacuum packaging	472
12.5.1	Introduction	472
12.5.2	Indent-Reflow Sealing using metal solder	473
12.5.3	Zero-level packaging using BCB	475
12.5.4	Hermeticity testing using microbolometers	475
12.6	Conclusions and outlook	476
	Acknowledgements	477
	References	477

Chapter 13	Fundamentals of spin filtering in ferromagnetic metals with application to spin sensors	
13.1	Introduction	481
13.2	Theoretical IMFP variation	483
13.2.1	The simplest model – mathematical bases of the calculation	483
13.2.2	A more complete treatment	488
13.2.3	An intuitive derivation	492
13.2.4	Comparison with the Schönhense and Siegmund model	495
13.3	Experimental study of $\Delta\sigma$	495
13.4	Spin precession and spin filters	498
13.4.1	Density-operator formalism	499
13.4.2	Electron transmission through ferromagnetic bilayers	501
13.4.3	The bilayer with collinear magnetizations	502
13.4.4	The bilayer with perpendicular magnetizations	503
13.5	Discussion and conclusion	504
	Acknowledgements	506
	References	506
	Index	509

A

absorption

coefficients 11, 12, 152, 195–197, 209, 226, 282, 309, 451

polySiGe microbolometers 459–460

SiGe detectors 421–423, 426–427, 442

absorption-edge spectroscopy (ABES) 312, 313–315, 325

active imaging 299, 300–301

active IR countermeasure systems 201

AEG 32

AFM (atomic force microscopy) 148, 216

AIM 53, 283, 302

Al, and vapor-HF processing 463

Al-free materials 124–125, 142

Al-mirror 434–435

AlGaAs barriers 55, 99, 102, 110, 114

AlGaAs/GaAs 153, 275, *see also* QWIPs

ALE (atomic layer epitaxy) 246

annealing 147–148, 153, 319, 342, 357, 453, 454

anodic oxidation 420

APDs *see* avalanche photodiodes

As diffusion/implantation 34

As doping 240, 255, 256, 291, 302, 311, 323–324, 325–326, 326

astronomy applications 29, 33, 233, 251, 271, 300

AT&T Bell Laboratories 85

atomic force microscopy (AFM) 148, 216

atomic layer epitaxy (ALE) 246

Au doping 283

Au films 505

Au pixel separators 385

Au/AuZn electrodes 142

Au/Co/Au multilayer 504

Au/Ge and Au ohmic contact 55, 95, 104, 107

Au/n-Si SB diode 356

Au/SnPb eutectic bonding 473

Auger exclusion 285

Auger recombination

HgCdTe (MCT) 17, 70–71, 163, 187, 242–245, 280, 303

InAs/(GaIn) Sb superlattices 163, 176, 187

lead salt detectors 275

type-II superlattices 191, 201, 203, 204, 228

automotive applications 58, 70, 305, 397, 449–450, 472

avalanche gain 301, 333

avalanche photodiodes (APDs) 233, 310, 331–337, 410

B

BAE Systems 31, 272, 274, 283

ball limiting metallurgy (BLM) 139

band alignment 191–192

modeling, GaSb/InAs superlattices 200–201

bandgap, HgCdTe (MCT) 233–234, 236–238

bandgap engineering 69, 194, 202, 305

barium strontium titanate (BST) 61, 62

BCB (BenzoCycloButene) 473, 475, 476

Be doping 84, 144, 170, 212, 215

BEEM technique 496

Bi-Sb-Te thermoelectric materials 65

Bi-Te thermoelectric materials 65

bias-selectable detector 302

BIB (blocked impurity band) devices 31, 37–38, 68

bicMOS processing 58, 450, 453

BID (Blocked Intersubband Detector) 114–115

BLIP condition 16–17, 25

HgCdTe 2D arrays 272, 273, 274, 296, 303

InSb photodiodes 30–33

QWIPs 57, 90, 91, 94, 100, 107

BLM (ball limiting metallurgy) 139

blocked impurity band (BIB) devices 37–38, 68

blocked intersubband detector (BID) 114–115

blooming 274, 296, 361–362

blue shift 129–130

Boeing *see* Rockwell/Boeing

bolometers 5, 9, 23, 26, 31–32, 62, 68, 122, 353, 379–383, 411, 451, *see also*

microbolometers

boron (B) 370, 373, 404, 413, 416, 423, 429, 431, 444, 455

bound-to-bound (B-B) intersubband absorption 128–129
 bound-to-continuum (B-C) intersubband absorption 85, 100, 111, 128–129
 bound-to-miniband (B-M) intersubband absorption 128–130
 bound-to-quasibound (BQB) intersubband absorption 86–87, 93, 102, 103, 110–111, 115, 128–129, 146
 Bridgman crystal growth method 247, 284, 285
 broad-band QWIP imaging camera 102–110
 buffered direct injection 278
 bulk crystal growth 30, 245, 247–248, 274, 284
 Burstein-Moss effect 33

C
 C-QWIP (corrugated QWIP) 152
 capacitive transimpedance amplifier (CTIA) 278, 472
 carbon 410–411
 carrier concentration, HgCdTe (MCT) 238–239, 258–260
 carrier generation rate, QWIPs 72, 131
 carrier lifetime
 HgCdTe (MCT) 241–245, 300, 309, 330, 338
 type-II superlattices 204, 225
 carrier mobility, HgCdTe (MCT) 240–241, 258–260
 cavity oxide 434–435
 CCDs (charge coupled devices) 29, 36, 37, 276, 360–363, 365, 367, 373, 384
 CdTe, in MCT 233, 234, 235, 246, 252, 281, 285, 316, 317, 344
 CdTe buffer layers 249, 251, 286, 300, 341–342, 344
 CdTe substrates 28, 33, 35, 49, 249, 250, 252
 CdTe/CdZnTe buffer layers 255, 286
 CdTeSe 285
 CdZnTe layers 255
 CdZnTe substrates 28, 33, 35, 49, 249, 250, 254, 255, 283, 284–285, 286, 291, 296, 302, 318, 322, 325, 341–348
 ceramic thin films 62–64
 characterization, of HgCdTe (MCT) 256–260, 334, 345
 charge injection efficiency 95–96, 107–108
 charge sweep device (CSD) 362–363, 366
 chemical vapor deposition *see* CVD
 chip carriers 138
 CI Systems Inc. 313
 CMOS 29–30, 37, 48, 57, 58, 107, 108, 112, 141, 276–279
 microbolometers 449–450, 453, 457, 467–468, 477
 Si infrared FPAs 360, 374, 377, 383, 385
 Co thin films 495–498, 504
 Co₂Si detectors 367–368
 commercial/industrial applications 38, 58, 65–66, 88, 304, 312, 396–397
 communications applications 201

composite detector technology 64
 condensation, polySiGe microbolometers 462–463
 conduction band
 HgCdTe 280, 281
 InAs/(GaIn)Sb superlattices 160, 170
 QWIPs (n-type QWIPs) 123, 128–130, 146–147
 Si/Ge detectors 393, 398
 type-II superlattices 196, 200–201
 cooled Si FPAs 374–386
 cooled type-II photoconductors 208–211
 cooled type-II photodiodes 215–227
 coolers 94, 97, 98, 99, 112, 124, 273–274, 303, 367, *see also* cryogenic cooling
 corrugated QWIP (C-QWIP) 152
 corrugation 146, 151–152
 crosstalk 274, 288, 291, 296, 297, 330, 363
 cryogenic cooling 5, 7, 11, 16, 21, 23, 58, 68, 272, 337, 411
 cost 49, 58, 209, 270
 see also cooled systems; coolers
 cryopumps 310
 crystal growth *see* growth technologies
 crystal mining operation 247
 crystal structure, HgCdTe (MCT) 235–236
 CSD (charge sweep device) 362–363, 366
 CTIA (capacitive transimpedance amplifier) 278, 472
 Cu at LPE growth stage 289
 Cu doping 283
 Cu substrates 497–498
 CVD (chemical vapor deposition) 245, 251, 252–254, 371, 453–455, *see also* MOCVD
 Czochralski crystal growth method 247

D
 dark current 39–41
 HgCdTe detectors 39–41, 44, 51, 332, 335–336, 337
 InAs/(GaIn)Sb superlattices 173
 QWIPs 40–41, 47, 51, 85–87, 94, 95, 104–108, 111, 115, 131–132, 135, 142, 145, 148, 276
 Schottky-barrier FPAs 356, 370
 SiGe detectors 410, 411, 412, 423–438, 440, 442, 444–445
 type-II superlattices 201–202, 227
 DAS (digital acquisition system) 98
 densities of states 483–495
 DERA (UK) 64
 detectivity (D')
 extrinsic silicon detectors 224
 HgCdTe 292, 295–296
 InAs/(GaIn)Sb superlattices 184–185
 photon detectors 10–11, 21, 25, 41–43, 67, 71, 123–124
 QWIPs 41–43, 73, 89–90, 105–106, 115, 125–126, 130, 133, 135, 150–151
 SiGe detectors 412, 424–430, 444–445
 thermal detectors 21

- type-II superlattices 206–207, 213, 214, 224, 227
- dielectric bolometer 62
- diethyl telluride (DETe) 252
- Difference of Gaussian (DoG) filter 304
- digital acquisition system (DAS) 98
- dimethyl cadmium (DMCd) 252
- dipping, LPE crystal growth 250, 251, 284, 290
- direct injection 277–278
- direct Schottky injection (DSI) FPA 363
- dislocation densities, HgCdTe MBE technology 320–321, 341, 342
- dislocations in SiGe epilayers 398
- doping 234, 282
