<i>Preface</i>	xvii
----------------------	------

<i>Bibliography</i>	xix
---------------------------	-----

Milk

1 Introduction	1
2 What is the typical composition of cow's milk and what milk constituents favour cheesemaking?	3
3 How do seasonal variations in milk composition affect cheese quality?	5
4 What are milk salts and how do they affect the properties of cheese?	7
5 What are the compositions of other species' milks and how does this affect their cheesemaking properties?	9

Preparation of cheesemilk

6 Introduction	11
7 What problems are caused by psychrotrophs?	13
8 Why do elevated somatic cell counts cause difficulty in cheesemaking?	16
9 Why must milk be standardised for cheesemaking?	18
10 Why is cheesemilk usually pasteurised?	20
11 What effects does pasteurisation have on cheesemilk?	22

12	How does one improve the cheesemaking properties of over-pasteurised milk?	24
13	What is thermisation and why is it used?	26
14	Why are colours sometimes added to cheesemilk?	27
15	What effects does cold storage have on the properties of milk?	28
Ultrafiltration of cheesemilk		
16	Why is ultrafiltration used for cheesemaking and how is it applied?	30
Acidification		
17	Introduction	34
18	What are starters and what starter types are used for cheesemaking?	36
19	What problems are caused by antibiotic residues in milk?	38
20	What are lactenins and how do these natural substances inhibit acid production?	40
21	What are bacteriophage and what strategies should be used to avoid phage infection?	42
22	What factors affect the buffering capacity of cheese?	47
23	What enzymes from starters contribute to cheese ripening? ...	48
Conversion of milk to curd		
24	Introduction: how does rennet coagulate milk?	50
25	Why is the Phe-Met bond of κ -casein so susceptible to rennet action?	52
26	How can one demonstrate that there are two stages to rennet coagulation?	54
27	What enzymes are in rennet?	55
28	What factors affect the retention of rennet in cheese curd?	57
29	What rennet substitutes are suitable for cheesemaking?	59
30	What factors affect rennet coagulation time?	60
31	What effects has homogenisation of milk on the manufacture and quality of cheese?	63
32	How does homogenisation affect the functionality of cheese? .	66
33	Why is CaCl_2 often added to cheesemilk?	69
Syneresis		
34	Introduction: what is syneresis?	72
35	How does the composition of milk affect syneresis?	74
36	What processing variables affect syneresis?	75
37	Why are certain cook temperatures used for certain cheeses? .	77
38	What is case hardening and what problems does it cause?	79

Salt in cheese

39	Introduction: what are the functions of NaCl in cheese?	80
40	What are the typical NaCl levels in different cheeses?	82
41	What are the differences between dry-salting and brine-salting?	84
42	What factors affect salt uptake in cheese curd?	87
43	How does NaCl affect cheese composition?	90
44	What causes the outside of brine-salted cheese to become slimy and sticky?	92
45	How should cheese brine be prepared and maintained?	94
46	How does NaCl affect the microbiology of cheese?	96
47	How can one make low-sodium cheese?	98

Cheese yield

48	Introduction: why is cheese yield important?	100
49	How is cheese yield defined?	102
50	How can cheese yield be predicted?	105
51	What factors associated with the milk affect cheese yield?	107
52	What factors under the control of the cheesemaker affect yield?	110

New technologies

53	What potential uses do high hydrostatic pressures and high-pressure homogenisation have in cheesemaking?	115
----	---	-----

The microbiology of cheese ripening

54	Introduction	117
55	What factors affect microbial growth in cheese?	119
56	What are non-starter lactic acid bacteria and how do they affect cheese quality?	124
57	What causes the development of gas during ripening?	131

Pathogens and food poisoning bacteria

58	Introduction	133
59	What cheeses are most liable to pathogens?	134
60	Which pathogens survive pasteurisation and which are killed?	136
61	Do pathogens grow during cheese ripening?	137
62	What is <i>Mycobacterium avium</i> subsp. <i>paratuberculosis</i> and how is it controlled?	140
63	Is <i>Escherichia coli</i> O157:H7 of concern to cheesemakers?	141
64	What factors should be considered to reduce coliform counts?	143
65	What are enterococci and are they pathogenic?	145
66	What factors should be considered when developing a HACCP plan for cheesemaking?	146
67	What are biogenic amines and how are they produced?	148

68	What are mycotoxins, where do they come from and what problems do they cause?	150
Nutritional aspects of cheese		
69	Introduction	152
70	What are typical levels of vitamins in different cheeses?	153
71	Is cheese good for your teeth?	155
72	What are typical calcium levels in different cheeses?	157
Packaging		
73	Introduction: how may cheese be packaged?	159
74	Why does mould develop under the packaging?	161
Whey processing		
75	What products may be produced from whey?	163
Analysis of cheese		
76	Introduction	166
77	What is the correct way to sample cheese for analysis?	167
78	How are volatile flavour compounds measured in cheese?	170
79	What procedures are available for the sensory analysis of cheese and are they reliable?	172
80	How reliable is cheese grading?	174
Principal families of cheese		
81	Introduction	176
82	What is a 'controlled designation of origin'?	178
83	How are cheese varieties classified?	181
84	How did cheese originate?	184
85	Who are the major cheese consumers and producers in the world?	185
86	What are the differences between acid-curd cheese and yoghurt/fermented milks?	188
Flavour, texture and flavour defects in hard and semi-hard cheeses		
87	Introduction	189
88	How does flavour develop in cheese during ripening?	191
89	How can the problem of bitterness in cheese be solved?	194
90	What is hydrolytic rancidity and how can it be avoided?	196
91	What is late gas blowing and how may this defect be avoided?	198
92	What general factors affect the texture of hard and semi-hard cheeses?	200
93	Cheese is weak-bodied. What strategies could be adopted to produce a firmer cheese and what are the effects of each treatment?	202

94	What strategies should be adopted and what are the effects of each treatment to obtain a less acid Cheddar cheese?	204
95	What strategies can be adopted to soften the texture of a hard cheese?	206

Grana-type cheeses and Parmesan

96	Introduction	208
97	What causes the traditional grainy texture of Italian Grana-type cheeses?	209
98	What common problems are associated with Grana-type cheeses?	210
99	How do traditional Italian Grana-type cheeses and industrial 'Parmesan' differ?	212

Cheddar cheese

100	Introduction	214
101	What is cheddaring and what physicochemical changes occur during this process?	217
102	What are the mechanical and slit openings in Cheddar and how may they be avoided?	219
103	Why do salted Cheddar curd pieces not fuse together properly?	220
104	Why is it important to control the composition of Cheddar cheese to ensure high quality?	221
105	Why does cheese develop a pink discoloration?	223
106	What factors lead to texture defects in low-fat/reduced-fat Cheddar cheese?	225
107	What factors favour the development of calcium lactate crystals in cheese?	228

Dutch-type cheeses

108	Introduction	230
109	Why is the surface of Gouda cheese slimy and discoloured? ..	232
110	Why is the texture of Gouda cheese tough and the flavour flat?	234
111	Why does Gouda cheese have a soapy off-flavour?	236
112	Why does Gouda cheese have irregular eye distribution?	238
113	What problems do <i>Propionibacterium</i> spp. cause in Gouda cheese? How are they controlled?	240
114	Under which conditions do blisters occur under the wax layer of Gouda-type cheese?	241
115	How may late blowing be avoided in Gouda-type cheeses? ...	242
116	How can excessive gas formation by thermophilic streptococci take place in Gouda cheese?	244

Swiss cheese

117	Introduction	246
118	What factors affect eye development in Swiss cheese?	248
119	What causes 'blind' Emmental cheese?	250
120	What causes irregular eye formation, slits or cracks in Emmental cheese?	252
121	What is aspartase of <i>Propionibacterium</i> ?	254
122	How does aspartase activity of <i>Propionibacterium</i> affect Swiss cheese?	255
123	How may the size and quantity of the eyes in Emmental-type cheese be controlled?	257
124	How do I control the elastic texture of Swiss-type cheese?	260
125	Why does Swiss cheese have a sweet flavour?	262
126	What are the causes of the most common flavour defects of Swiss cheese?	263
127	Is Emmental cheese hygienically safe?	265

White-mould cheese

128	Introduction	268
129	Why does the surface pH in Camembert cheese not increase adequately?	270
130	Why is mould development on Camembert or Brie inadequate? ..	273
131	Why does Camembert or Brie have a grey or brown colour? ..	275
132	Why does the texture of Camembert or Brie remain too hard? ..	277
133	Why does Camembert-type cheese become too liquid?	278
134	How are spoilage fungi controlled in white-mould cheeses? ...	279
135	How may the 'toad-skin' and 'cat-hair' defects of Camembert cheese be solved?	280
136	What causes bitterness and other flavour defects in Camembert?	282

Blue cheese

137	Introduction: what are Blue cheese varieties?	284
138	Why does Blue cheese develop brown spots?	286
139	How may spoilage fungi be controlled in Blue cheese?	287
140	Why does Blue cheese not develop adequate veining?	288

Bacterial surface-ripened cheeses

141	Introduction: what are bacterial surface-ripened (smear) cheeses?	289
142	What organisms grow on the surface of smear cheeses?	291
143	Why might smear cheese develop excessive mould?	293
144	Why does cheese not develop an adequate smear?	295
145	How may patchy smear development be avoided?	297

Low-moisture Mozzarella cheese (LMMC)

146	Introduction	298
147	What are <i>pasta-filata</i> cheeses and what physicochemical changes occur during cooking/stretching?	300
148	How can expression of free watery serum be avoided in cooked LMMC?	302
149	I recently changed from bacterial to direct acidification. Why is my LMMC different?	305
150	How may moisture levels in LMMC be controlled and what changes should be expected if moisture changes?	307
151	Shredded cheese tends to mat together into wet aggregates. How may the shreddability of LMMC be improved?	310
152	Why does LMMC not develop a smooth stretchable consistency on heating?	312
153	Why does LMMC become excessively soft and fluid on heating?	314
154	Why does LMMC have poor flowability?	316
155	Why does LMMC brown excessively on cooking?	317
156	Why and how do the functional properties of LMMC change on heating?	319
157	Why does LMMC become excessively soft and gummy during ripening?	321
158	What factors affect the functionality of LMMC?	322
159	LMMC is tough and rubbery; what might be the problem? ...	323
160	What causes the soft rind/soft surface defect in LMMC?	324
161	What causes soft body defect in LMMC?	325
162	How may the development of free oil during melting be controlled?	326
163	How can the browning rate of LMMC be controlled?	329

Cheeses ripened in brine

164	Introduction	330
165	What causes early and late gas blowing in white-brined cheese?	332
166	What causes blowing of the white-brined cheese containers? ..	336
167	How may mouldiness in white-brined cheese be avoided?	337
168	What causes softening of the cheese body in white-brined cheeses?	338
169	Why is the brine surrounding my white-brined cheese ropy? ..	341

Acid and acid/heat-coagulated cheeses

170	Introduction	343
171	How may wheying off (spontaneous syneresis) in Quarg be avoided?	346
172	Why is Quarg dry and grainy?	347

173	How may over-acid and bitter flavour defects in Quarg be avoided?	348
174	How may the viscosity of Cream cheese be controlled?	349
175	Free oil forms in Cream cheese at the outlet of the heat exchanger. How can this problem be resolved?	350
176	Why is the coagulum of Cottage cheese weak with poor syneresis?	351
177	What is agglutination of starter bacteria and how do I avoid sludge formation?	352
178	How do I solve the 'floating curd' defect in Cottage cheese? ..	353
179	Why are the curd particles for Cottage cheese slick and slimy? ..	354
180	Why is there whey separation from my Cottage cheese after packaging?	355
181	What strategies should be adopted to improve the yield of Cottage cheese?	356
182	What are the likely causes of surface discoloration, off-flavours and bitterness in Cottage cheese?	357
183	How may the shelf-life of Cottage cheese be extended?	358
184	What are harsh and green flavour defects in Cottage cheese? ..	359
185	How may the mouthfeel of Queso Blanco be improved?	360
186	What approaches may be used to control the texture of Queso Blanco?	361

Cheese as a food ingredient

187	Introduction	362
188	How may the browning of heated cheese be controlled?	364

Processed cheese

189	Introduction: what is processed cheese?	365
190	Why does processed cheese sometimes have a gummy pudding-like texture and oil-off?	368
191	Why does processed cheese sometimes have a soapy flavour? ..	371
192	How is the firmness and spreadability of processed cheese controlled?	373
193	Why does processed cheese have a dry, short, crumbly texture? ..	376
194	Why does processed cheese have a soft, inelastic, adhesive and spreadable texture?	379
195	What causes crystals in processed cheese and how can this problem be minimised?	381

Cheese-like products

196	Introduction: what are analogue cheeses?	384
197	What is enzyme-modified cheese?	387

<i>Index</i>	389
