

BIOFILTRATION FOR AIR POLLUTION CONTROL

Joseph S. Devinny
Marc A. Deshusses
Todd S. Webster

Contents

1	Introduction	1
1.1	Air pollution legislation	2
1.2	Types of waste gas treatment	3
1.2.1	Condensation	3
1.2.2	Incineration	3
1.2.3	Adsorption	4
1.2.4	Absorption	4
1.2.5	Membrane systems	4
1.2.6	Biological treatment	5
	1.2.6.1 Biofilters	7
	1.2.6.2 Biotrickling filters and bioscrubbers	8
1.2.7	Technology effectiveness and costs	10
1.3	Historical review of biofiltration	13
1.4	Biofiltration marketplace	15
1.5	Biofilter terminology	17
1.5.1	Empty bed residence time and true residence time	17
1.5.2	Surface (or volumetric) and mass loading rate	18
1.5.3	Removal efficiency and elimination capacity	19
1.6	Additional biofiltration resources	21
1.7	Conclusions	22
2	Mechanisms of biofiltration	23
2.1	Introduction	23
2.2	Gas transfer	23
2.2.1	The equilibrium	23
2.2.2	Transfer rates	24
2.3	The water phase	28
2.4	Adsorbed contaminants	28
2.5	Contaminant biodegradation	34
2.5.1	The biofilm	34
2.5.2	Kinetics	34
2.6	Product generation	37
2.7	Heat generation	39
2.8	Conclusions	40

3	Biofilter media	41
3.1	Introduction	41
3.2	Criteria for the choice of an optimal biofilter medium	42
3.2.1	Inorganic nutrient content	42
3.2.2	Organic content	42
3.2.3	Chemical and inert additives	42
3.2.4	Water content	43
3.2.5	pH	43
3.2.6	Sorption characteristics, porosity	43
3.2.7	Bacterial attachment	44
3.2.8	Mechanical properties	44
3.2.9	Odor of the packing	44
3.2.10	Packing cost and lifetime	44
3.2.11	Packing disposal	45
3.3	Materials used for biofilter media	45
3.3.1	Compost	45
3.3.2	Peat	45
3.3.3	Soil	47
3.3.4	Activated carbon	47
3.3.5	Wood chips or bark	48
3.3.6	Perlite	48
3.3.7	Synthetic media	48
3.4	Description of selected biofilter media	49
3.4.1	Compost-based and organic media	49
3.4.2	Soil media	50
3.4.3	Synthetic media	50
4	Controlling factors and operation of biofilters	51
4.1	Introduction	51
4.2	Water content	51
4.2.1	Water in porous media	52
4.2.2	Thermodynamic relationships	55
4.2.3	Biological effects	56
4.2.4	Partition effects	57
4.2.5	Interference with air flow	58
4.2.6	Drainage	59
4.2.7	Control of water content	59
4.3	Temperature	60
4.4	Medium pH and alkalinity	62
4.5	Nutrients	65
4.6	Contaminant load and surface load	67
4.7	Oxygen limitation	68
4.8	Air flow direction	71
4.9	Dust and grease	72

4.10	Extreme biofilters	73
4.10.1	Low pH biofilters for sulfide oxidation	73
4.10.2	Anaerobic conditions in biofilters for chlorinated hydrocarbons	74
4.10.3	Biofilters using cometabolism	76
4.10.4	NO _x biofilters	77
4.10.5	High-temperature biofilters	78
4.10.6	Low-water-content biofilters	78
5	Microbial ecology of biofiltration	81
5.1	Introduction	81
5.2	Microbial species in biofilters	81
5.2.1	Selection and proliferation	81
5.2.2	Inoculation of biofilters	83
5.3	Substrate utilization	85
5.3.1	Induction	86
5.3.2	Substrate interaction	86
5.3.3	Acclimation	87
5.3.4	Uptake of dissolved compounds	90
5.3.5	Phagocytosis	90
5.3.6	Exoenzymes	90
5.3.7	Aerobic and anaerobic metabolism	91
5.3.8	Cometabolism	92
5.3.9	Toxicity	93
5.4	The microbial community	93
5.4.1	Longitudinal stratification	93
5.4.2	Biofilms in biofilters	94
5.4.3	Higher organisms in biofilters	99
5.5	Biomass clogging	100
5.6	Microbial observation of biofilters	102
5.6.1	Microscopic observation	102
5.6.1.1	Light microscopes	102
5.6.1.2	Electron microscopes	103
5.6.2	Viable heterotrophic plate counts	105
5.6.3	Phospholipid fatty acid analysis	107
5.6.4	Deoxyribonucleic acid (DNA) extraction	109
5.7	Conclusions	109
6	Modeling biofiltration	111
6.1	Introduction	111
6.2	The challenge of modeling biofiltration	112
6.3	Biofilm models	113
6.3.1	Ottengraf's model	113
6.3.2	Devinny and Hodge model	120

6.3.3	Shareefdeen et al. model	125
6.3.4	Shareefdeen and Baltzis model with patches of biomass	126
6.3.5	Deshusses et al. model	128
6.4	QSAR models	134
6.4.1	Choi et al. model	135
6.4.2	Johnson and Deshusses model	136
6.4.3	Govind et al. model	137
6.5	Summary	139
7	Design of biofilters	141
7.1	Introduction	141
7.2	Experimental protocol for assessing biofilter technology	142
7.2.1	Preliminary testing and assessment of technology	143
7.2.2	Bench-scale testing	144
7.2.3	Pilot-scale testing	147
7.3	Design of full-scale biofilters	149
7.3.1	Reactor configuration	149
7.3.2	Biofilter vessel construction	153
7.3.3	Filter bed medium	157
7.3.4	Air distribution systems	161
7.3.5	Waste gas preprocessing	165
7.3.5.1	Contaminant species and concentrations	165
7.3.5.2	Particulate emissions	165
7.3.5.3	Temperature	166
7.3.5.4	Humidification for moisture control	166
7.3.6	Water irrigation for moisture control	168
7.3.6.1	Irrigation systems	169
7.3.6.2	Operational problems associated with irrigation systems	171
7.3.7	Computer control and analytical systems	172
7.3.7.1	Computer control systems	172
7.3.7.2	Analytical systems	173
7.3.7.3	Electrical requirements	173
7.4	Costs and economic considerations	174
7.4.1	Capital (investment) costs	174
7.4.2	Operating costs	175
7.4.2.1	Energy consumption	175
7.4.2.2	Water consumption and disposal	178
7.4.2.3	Monitoring and maintenance	178
7.4.2.4	Media replacement	178
7.4.3	Cost estimate example for a full-scale biofilter	179
7.4.4	Full-scale biofilter cost example	179
7.4.4.1	Capital costs	179
7.4.4.2	Annual operation and maintenance costs	180
7.4.4.3	Medium replacement costs (every 5 years)	181

7.4.4.4	Annualized costs	181
7.4.4.5	Other cost estimates	182
7.4.5	Summary	183
7.5	Conclusions	183
8	Biofilter startup and monitoring	185
8.1	Startup	185
8.1.1	Material shipping and handling	185
8.1.2	Loading of material	186
8.1.2.1	Inoculation	187
8.1.2.2	Nutrient and chemical addition	187
8.1.3	Air flow rates and mass loading	188
8.1.4	Water irrigation	189
8.1.5	Temperature	190
8.2	Monitoring	190
8.3	Air load	190
8.4	Contaminants	195
8.4.1	Input and output concentrations	195
8.4.2	Contaminant concentration variability	196
8.4.3	Pulse testing	196
8.4.4	Product concentrations	197
8.4.5	Instrumentation and techniques	197
8.5	Medium characteristics	200
8.5.1	Particle size distribution	200
8.5.2	Moisture characteristic curve and field capacity	200
8.5.3	pH and alkalinity	200
8.6	Water content	201
8.6.1	Input and output relative humidity	201
8.6.2	Medium moisture content	202
8.6.3	Irrigation water	202
8.7	Temperature	203
8.8	Medium permeability	203
8.8.1	Average permeability and head loss	203
8.8.2	Permeability homogeneity	204
8.9	Biological activity	205
8.9.1	Treatment success	205
8.9.2	Cell counts	205
8.9.3	Respiration	206
8.9.4	Biomass	206
8.9.5	Fatty acid analysis	207
8.9.6	Visual inspection of biofilters	207
8.10	Leachate characteristics	208
8.11	Humidifiers	208
8.12	Statistical analysis	209
8.13	Conclusions	209

9	Application of biofilters	211
9.1	Introduction	211
9.2	The ARA-Rhein biofilter: wastewater treatment odors and VOCs	211
9.2.1	Design and operation comments	211
9.2.2	Performance	214
9.3	Odor control from flavor and fragrance manufacturing	215
9.3.1	Design and operation comments	215
9.4	Odor reduction from flavor manufacturing in a closed bed biofilter	216
9.4.1	Design and operation comments	217
9.4.2	Performance	217
9.5	The Poughkeepsie biofilter: wastewater treatment odors	218
9.5.1	Design and operation comments	218
9.5.2	Performance	220
9.6	Soil biofilter to treat odors from a fabric softener facility	220
9.6.1	Design and operation comments	223
9.6.2	Performance	224
9.7	Small biofilters for gasoline vapor treatment at a soil-vapor extraction site	225
9.7.1	Design and operation comments	225
9.7.2	Performance	227
9.8	Treatment of VOC mixtures from exhaust air in the wood industry	230
9.8.1	Design and operation comments	231
9.8.2	Performance	232
9.9	Control of VOCs from ink-drying operations	232
9.9.1	Design and operation comments	233
9.9.2	Performance	235
9.10	Removal of high concentrations of ethanol from a foundry off-gas	235
9.10.1	Design and operation comments	236
9.10.2	Performance	239
9.11	Large open-bed biofilters for the removal of VOCs and odors	240
9.11.1	Design and operation comments	241
9.11.2	Performance	242
9.12	High-concentration, low-flow biofilter for VOC treatment	243
9.12.1	Design and operation comments	244
9.12.2	Performance	245
9.13	Soil biofilter for VOC removal in flexographic printing off-gases	245
9.13.1	Design and operation comments	245
9.13.2	Performance	247

9.14 Biofilter or biotrickling filter? Example of an intermittently watered biotrickling filter for odor control	248
9.14.1 Design and operation comments	248
9.14.2 Performance	250
